

2025

ANNUAL REPORT

**Enabling AI Semiconductor Device Packaging
and Advanced Substrate Fabrication**

Dear Fellow Shareholders,

Fiscal 2025 marked an important inflection point for Amtech Systems. Over the past two years, we took decisive actions to optimize our businesses, strengthen cash generation, and reposition the company to benefit from long-term secular growth opportunities. In FY 2025, these efforts translated into improved profitability, stronger operating leverage, and a significantly strengthened balance sheet.

While demand across the semiconductor market remained uneven, particularly in mature-node industrial and automotive applications, our results benefited from growing demand for the equipment and solutions we provide for advanced semiconductor packaging and server board assembly supporting Artificial Intelligence (AI) infrastructure. Fourth quarter revenue exceeded our expectations, and adjusted EBITDA reached its highest quarterly margin in many years, reflecting disciplined cost control, improved product mix, and the benefits of our more flexible, semi-fabless manufacturing model.

A key driver of this performance was continued execution of our business optimization initiatives. Over the past 18 months, we implemented more than \$13 million of annualized cost savings, including consolidating our manufacturing footprint from seven sites to four and transitioning portions of our production to outsource partners. These actions meaningfully reduced our fixed cost base, lowered our EBITDA breakeven point, and improved our ability to scale profitably as volumes increase.

Within our Thermal Processing Solutions segment, advanced semiconductor packaging was a highlight throughout the year, driven primarily by ongoing investments in AI data center infrastructure. In the fourth quarter, equipment used for AI applications accounted for more than 30% of segment revenue, up from approximately 25% in the prior quarter. Based on customer engagement and channel feedback, we see continued momentum and are investing in next-generation packaging equipment to enable higher-density, volume production and expand our addressable market.

Our Semiconductor Fabrication Solutions segment continued to face headwinds from weak mature-node demand. Despite this environment, performance modestly exceeded expectations due to disciplined cost management and a more focused commercial strategy. We remain committed to growing our high-margin consumables revenue by leveraging our foundry services and targeted product development, particularly in specialized markets such as defense and medical where our differentiated capabilities support recurring revenue. In parts and services, we are employing customer-specific engagement to deliver value to customers looking to optimize fab operations and lower operating costs.

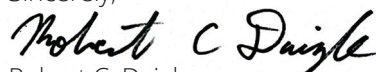

Across the company, our revenue mix continued to evolve in line with our strategy. Approximately 40% of fourth quarter revenue was generated from recurring sources, including consumables, parts, and services. This balance reflects our intent to expand higher-margin recurring revenue while selectively investing in capital equipment opportunities tied to attractive secular growth trends.

Our focus on cash generation and working capital discipline delivered tangible results. We ended fiscal 2025 with nearly \$18 million in cash and no debt, compared to \$11 million of cash one year earlier. This strengthened balance sheet provides greater strategic flexibility and positions us to invest in the highest-return growth opportunities.

Looking ahead, while near-term market conditions remain dynamic, we believe the structural changes we have made have materially improved our ability to generate consistent profitability and free cash flow. With the majority of our optimization initiatives complete, our focus is increasingly on growth—expanding our presence in advanced packaging, increasing recurring revenue, and investing in differentiated products and applications.

I am confident that Amtech is positioned to deliver profitable growth with reduced volatility and create meaningful long-term shareholder value. I thank our employees for their dedication and our shareholders for their continued support.

Sincerely,

A handwritten signature in black ink, reading "Robert C. Daigle". The signature is fluid and cursive, with the first name "Robert" being more prominent and the last name "Daigle" following in a similar style.

Robert C. Daigle
Chief Executive Officer

AMTECH SYSTEMS, INC.

(Exact name of registrant as specified in its charter)

Arizona	86-0411215
(State or other jurisdiction of incorporation or organization)	(I.R.S. Employer Identification No.)
58 South River Drive Suite 370, Tempe, Arizona	85288
(Address of principal executive offices)	(Zip Code)

Registrant's telephone number, including area code: 480-967-5146

Securities registered pursuant to Section 12(b) of the Act:

Title of each class	Trading Symbol(s)	Name of each exchange on which registered
Common Stock, par value \$0.01 per share	ASYS	NASDAQ Global Select Market

Securities registered pursuant to Section 12(g) of the Act:

Common Stock, \$0.01 Par Value

(Title of Class)

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes ☐ No ☒

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or 15(d) of the Act. Yes ☐ No ☒

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. ☒ Yes ☐ No

Indicate by check mark whether the registrant has submitted electronically every Interactive Data File required to be submitted pursuant to Rule 405 of Regulation S-T (§ 232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit such files). ☒ Yes ☐ No

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, a smaller reporting company, or an emerging growth company. See the definitions of "large accelerated filer," "accelerated filer," "smaller reporting company," and "emerging growth company" in Rule 12b-2 of the Exchange Act.

Large accelerated filer	<input type="checkbox"/>	Accelerated filer	<input type="checkbox"/>
Non-accelerated filer	<input checked="" type="checkbox"/>	Smaller reporting company	<input checked="" type="checkbox"/>
		Emerging growth company	<input type="checkbox"/>

If an emerging growth company, indicate by check mark if the registrant has elected not to use the extended transition period for complying with any new or revised financial accounting standards provided pursuant to Section 13(a) of the Exchange Act. ☐

Indicate by check mark whether the registrant has filed a report on and attestation to its management's assessment of the effectiveness of its internal control over financial reporting under Section 404(b) of the Sarbanes-Oxley Act (15 U.S.C. 7262(b)) by the registered public accounting firm that prepared or issued its audit report. ☐

If securities are registered pursuant to Section 12(b) of the Act, indicate by check mark whether the financial statements of the registrant included in the filing reflect the correction of an error to previously issued financial statements. ☐

Indicate by check mark whether any of those error corrections are restatements that required a recovery analysis of incentive-based compensation received by any of the registrant's executive officers during the relevant recovery period pursuant to §240.10D-1(b). ☐

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes ☐ No ☒

As of March 31, 2025, the last business day of the registrant's most recently completed second fiscal quarter, the aggregate market value of the voting and non-voting stock held by non-affiliates of the registrant was approximately \$54,346,382, based upon the closing sales price reported by the NASDAQ Global Market on that date.

As of December 3, 2025, the registrant had outstanding 14,356,797 shares of Common Stock, \$0.01 par value.

DOCUMENTS INCORPORATED BY REFERENCE

Portions of the Definitive Proxy Statement related to the registrant's 2026 Annual Meeting of Shareholders, which Proxy Statement will be filed under the Securities Exchange Act of 1934, as amended, within 120 days of the end of the registrant's fiscal year ended September 30, 2025, are incorporated by reference into Items 10-14 of Part III of this Form 10-K.

Cautionary Note Regarding Forward-Looking Statements

Our discussion and analysis in this Annual Report on Form 10-K ("Annual Report"), our 2025 Annual Report to Shareholders, our other reports that we file with the SEC, our press releases and in public statements of our officers and corporate spokespersons contain "forward-looking" statements within the meaning of Section 27A of the Securities Act, Section 21E of the Exchange Act, and the Private Securities Litigation Reform Act of 1995. Forward-looking statements give our or our officers' current expectations or forecasts of future events. You can identify these statements by the fact that they do not relate strictly to historical or current events. You can also identify forward-looking statements by discussions of strategy, plans or intentions of management. We have tried, wherever possible, to identify such statements by using words such as "may," "plan," "anticipate," "seek," "will," "expect," "intend," "estimate," "believe," "continue," "predict," "potential," "project," "should," "would," "could," "likely," "future," "target," "forecast," "goal," "observe," and "strategy" or the negative thereof or variations thereon or similar terminology relating to the uncertainty of future events or outcomes. Any expectations based on these forward-looking statements are subject to risks and uncertainties and other important factors. Some factors that could cause actual results to differ materially from those anticipated include, among others, future economic conditions, including changes in the markets in which we operate; changes in demand for our services and products; our revenue and operating performance; difficulties in successfully executing our growth or restructuring initiatives; difficulties in executing on our strategic initiatives, the effects of competition in the markets in which we operate, including the adverse impact of competitive product announcements or new entrants into our markets and transfers of resources by competitors into our markets; the cyclical nature of the semiconductor industry; pricing and gross profit pressures; control of costs and expenses; risks associated with new technologies and the impact on our business; legislative, regulatory, and competitive developments in markets in which we operate; possible future claims, litigation or enforcement actions and the results of any such claim, litigation proceeding, or enforcement action; the impact of any future pandemic or other business interruptions on our business operations, financial results and financial position; risks of future cybersecurity incidents; adverse developments affecting financial institutions, including bank failures; and other circumstances and risks identified in this Annual Report or referenced from time to time in our filings with the SEC. The occurrence of the events described, and the achievement of expected results, depend on many events, some or all of which are not predictable or within our control. These and many other factors could affect Amtech's future operating results and financial condition and could cause actual results to differ materially from expectations based on forward-looking statements made in this document or elsewhere by Amtech or on its behalf.

Forward-looking statements are neither historical facts nor assurances of future performance. Instead, they are based on our or our officers' current beliefs, expectations and assumptions regarding the future of our business, future plans and strategies, projections, anticipated events and trends, the economy and other future conditions. Because forward-looking statements relate to the future, they are subject to certain risks and uncertainties. In light of these risks and uncertainties, there can be no assurance that the forward-looking information contained in this Annual Report will in fact transpire or prove to be accurate. You should not place undue reliance on these forward-looking statements, which speak only as of the date they were made.

The Company undertakes no obligation to update or publicly revise any forward-looking statement whether as a result of new information, future developments or otherwise after the date of this Annual Report. All subsequent written or oral forward-looking statements attributable to the Company or persons acting on its behalf are expressly qualified in their entirety by this cautionary statement. You are advised, however, to consult any further disclosures we make on related subjects in our subsequently filed Form 10-Q and Form 8-K reports and our other filings with the SEC. Also note that we provide a cautionary discussion of risks, uncertainties and possibly inaccurate assumptions relevant to our business under "Item 1A. Risk Factors" of this Annual Report. We note these factors for investors as permitted by the Private Securities Litigation Reform Act of 1995. You should understand it is not possible to predict or identify all such factors.

Unless the context indicates otherwise, the terms "Amtech," the "Company," "we," "us" and "our" refer to Amtech Systems, Inc., an Arizona corporation, together with its subsidiaries.

PART I

ITEM 1. BUSINESS

OUR COMPANY

We provide equipment, consumables and services for semiconductor device packaging, wafer production and device fabrication. Our products are used to fabricate and package semiconductor devices, such as graphic processing units (GPU's) used in AI applications, silicon carbide (SiC) and silicon (Si) power devices and other optical, analog and digital devices. We sell these products to semiconductor device packaging, electronic assembly and device fabrication companies worldwide.

Our Thermal Processing Solutions includes conveyORIZED reflow equipment for advanced semiconductor packaging and electronic assembly, high temperature conveyORIZED furnaces for power semiconductor substrate and electronic components manufacturing, and diffusion furnaces for (SiC) and (Si) power device production.

Our Semiconductor Fabrication Solutions include consumables, equipment and services for wafer polishing, dicing and cleaning.

Our strategy is to focus our efforts on fully capitalizing on advanced packaging equipment opportunities driven by AI infrastructure investments and expand our consumables and service business for semiconductor fabrication by providing exceptional service and high-quality products to underserved segments of the market.

We categorize each of our subsidiaries into one of two reportable segments, based primarily on the industries they serve:

Reportable Segment	% of 2025 Consolidated Net Revenue
Thermal Processing Solutions	73%
Semiconductor Fabrication Solutions	27%

These reportable segments are comprised of the following four wholly-owned subsidiaries:

Thermal Processing Solutions:

- BTU, a Delaware corporation based in Westford, Massachusetts, with operations in China, Malaysia and the UK, acquired in January 2015.

Semiconductor Fabrication Solutions:

- PR Hoffman, an Arizona corporation based in Carlisle, Pennsylvania, acquired in July 1997.
- Advanced Compound Materials, Inc., a Delaware corporation based in Spartanburg, South Carolina, founded in 2023;
- Intersurface Dynamics, a Connecticut corporation based in Bethel, Connecticut, acquired in March 2021; and
- Entrepix, an Arizona corporation based in Phoenix, Arizona, acquired in January 2023.

In both of our divisions we are focused on semiconductor and related processes and markets. We believe we are uniquely positioned in that our products are employed throughout the early and late stages of semiconductor and electronics manufacturing. Our products are key to the earliest stages of silicon or silicon carbide wafer manufacturing, then in semiconductor device manufacturing, then advanced semiconductor packaging and then finally in electronics assembly.

Our Thermal Processing Solutions business provides high performance equipment used in solder reflow operations for advanced semiconductor packaging and electronic assembly, furnaces used for producing power semiconductor packaging substrates and electronic components, and diffusion furnaces used in wafer processing. Reflow operations provide a cost effective, high throughput process for electronic packaging and assembly. Our equipment provides the precise temperature, atmospheric control and uniformity required to achieve high yields in mass production reflow operations. Our flux management system scrubs oven gases to minimize downtime, reduce defects from flux contamination and reduce environmental emissions.

Our Semiconductor Fabrication Solutions business provides processing consumables, equipment and services for wafer production. Our PR Hoffman consumables are used for lapping and Chemical Mechanical Planarization (CMP) processes in the manufacturing of SiC and Si power devices, analog devices, optics, ceramics and photonics. Our Entrepix products and services include equipment for SiC and Si wafer cleaning, testing equipment used for optimizing CMP processes, CMP equipment parts and services, and CMP foundry services. Our Intersurface Dynamics products include CMP slurries and dispersants, cleaning chemicals, lubricants and cooling fluids used for semiconductor wafer and optics processing. CMP processes are used to provide a high degree of flatness, parallelism, and surface finish. Common applications for this technology are silicon wafers used for semiconductor digital and analog devices, SiC wafers for power devices, optics and ceramics. These devices are used in a variety of applications including computers and servers, automotive electronics, industrial electronics, mobile phones, telecommunications equipment and medical devices.

We believe our product portfolio, developed through a track record of technological innovation as well as the integration of key acquisitions, provides exceptional value to semiconductor manufacturing by increasing yields, efficiency and throughput. We have been providing manufacturing solutions to the semiconductor industry for over 30 years and have leveraged our semiconductor technology and industry presence to capitalize on growth opportunities.

The semiconductor industry is historically cyclical with constantly evolving technical requirements and advancements and can be subject to tariffs and sourcing restrictions driven by geopolitical tensions. Therefore, future growth and profitability will depend on cyclical trends, our ability to produce equipment regionally and meeting performance requirements as technical requirements evolve. The current contraction cycle for mature node semiconductors is longer than the historical average, mainly attributed to a sustained decrease in demand for industrial equipment, computers, and smartphones after a period of heightened demand during the COVID pandemic, as well as reduced growth expectations for electric vehicles.

For information regarding net revenue, operating income and identifiable assets attributable to each of our two reportable segments, see Note 15 of the Notes to Consolidated Financial Statements included in “Item 8. Financial Statements and Supplementary Data” and “Item 7. Management’s Discussion and Analysis of Financial Condition and Results of Operations” in this Annual Report. For information on the products of each reportable segment, see “Thermal Processing Solutions Products” and “Semiconductor Fabrication Solutions Products” within this “Item 1. Business” section. For information regarding risks to our business, see “Item 1A. Risk Factors.”

Our fiscal year is from October 1 to September 30. Unless otherwise stated, references to the years 2025 and 2024 relate to the fiscal years ended September 30, 2025, and 2024, respectively.

COMPANY STRATEGY

Core Values: We believe Amtech’s core values (Safety, Customer Focus and Continuous Improvement) are critical to the success of the Company. We continue to recognize and reward behaviors consistent with these values throughout Amtech.

Secular Growth Drivers: We believe there are three key secular trends that are important to our future growth:

- **Artificial Intelligence** - With Artificial Intelligence (AI), we believe our reflow oven systems have leading market share with Outsourced Semiconductor Assembly and Test Services (OSATS) providers who perform advanced packaging of the AI chips.
- **Supply Chain Resiliency** - There is a global trend of creating supply chain resiliency by expanding and/or relocating operations outside of mainland China. We believe these factories will create demand for new equipment and services in growing regions like Southeast Asia and Mexico.
- **Advanced Mobility** - Advanced Mobility encompasses both the development and adoption of electric vehicles and charging infrastructure, including both electric vehicle (EV) and hybrid electric vehicles (HEV), as well as advanced automotive electronics including Advanced Driver Assistance Systems (ADAS), infotainment and telematics. Our products intersect these markets in multiple ways: CMP consumables and wafer cleaning systems for the SiC substrates used in the EV power inverters; thermal processing systems for producing EV battery cooling systems and ceramic substrates for HEV power semiconductor packaging; and reflow ovens for ADAS, infotainment and telematics component assemblies.

Customer-centric product development in R&D: We continue to invest in research and development to expand our Thermal Processing Solutions reflow equipment product-line for AI applications. Our goal is to expand our addressable market by enabling mass production of higher density packages. We are also investing in application development and R&D resources to accelerate growth of our Semiconductor Fabrications Solutions business by expanding our consumables product portfolio and providing exceptional technical support and service to customers.

Semi-Fabless Manufacturing Model: We have migrated to a semi-fabless manufacturing model for the majority of our capital equipment business to improve our ability to scale production and reduce fixed costs. Our manufacturing partners provide a cost-effective alternative to in-house production and help mitigate the financial impact of variable demand that is inherent to the capital equipment business.

THERMAL PROCESSING AND SEMICONDUCTOR FABRICATION SOLUTIONS OPERATIONS

We provide reflow equipment for chip packaging and electronic assembly, diffusion furnaces for wafer processing and furnaces used to produce ceramic based power semiconductor packages and passive electronic components as well as wafer cleaning equipment, CMP polishing consumables, wafer processing lubricants, coolants and cleaning chemicals and related services to leading semiconductor manufacturers.

We believe the accelerated investments in Artificial Intelligence (AI) infrastructure and increased investments in defense and aerospace applications will help drive future growth. Increasingly complex and dense packaging requirements and high energy demand for AI data centers may also create additional opportunities to expand addressable markets.

Although the semiconductor market has experienced significant growth over the past fifteen years and has recently experienced significant growth driven by AI GPUs, it remains cyclical by nature. The market is characterized by short-term periods of under or over utilization of capacity for most semiconductors, including microprocessors, memory, power management chips and other logic devices. When capacity utilization decreases due to the addition of excess capacity, semiconductor manufacturers typically slow their purchasing of capital equipment. Conversely, when capacity utilization increases, so does capital spending. We believe the continued expansion of our consumable and after-market product offerings, primarily in our Semiconductor Fabrication Solutions segment, will enable us to partially offset some of these cyclical effects.

THERMAL PROCESSING SOLUTIONS PRODUCTS

Our reflow equipment and furnaces are manufactured in our facility in China and by contract manufacturing partners located in China, Canada and Singapore. The following paragraphs describe the products that comprise our current product lines in our Thermal Processing Solutions business:

Continuous Thermal Processing Systems. We design, produce and sell thermal processing systems used in the solder reflow processes used in advanced semiconductor packaging including 2.5D and flip-chip and printed circuit board assembly.

Flip-chip reflow provides the physical and electronic bond of the semiconductor device to its package. Our range of convection reflow systems, utilizing closed loop convection technology, are rated at up to 400°C and operate in air or nitrogen atmospheres. These products utilize forced impingement convection technology to transfer heat to the substrate. Using configurable heating elements of up to eight kilowatts, they can process substrates in dual-lane, dual-speed configurations, thereby enabling our customers to double production without increasing the machine's footprint. These products are available in four models based on the heated lengths of thermal processing chambers. Heated length is based on the customer's required production rate and loading requirements. These products are manufactured at our ISO 9001:2015 certified facility in Shanghai, China and by a contract manufacturing partner in Singapore.

High-Temperature Belt Furnace. We also design, produce and sell high-temperature belt furnaces that operate at temperatures up to 1180°C and are capable of processing in controlled atmospheres, such as nitrogen, argon, and hydrogen. Applications include DBC, furnace brazing, annealing, glass-to-metal sealing, sintering, and heat-treating for diverse markets including automotive, semiconductors, aerospace and medical. These furnaces are manufactured at our ISO 9001:2015 certified facility in Shanghai, China and by a contract manufacturing partner in Canada.

Horizontal Diffusion Furnaces. We produce and sell 200mm and 300mm horizontal diffusion and deposition furnaces. Our horizontal furnaces currently address several steps in the semiconductor manufacturing process, including diffusion, high temperature oxidation (used in silicon power chips), and annealing. Our horizontal furnaces generally consist of three large modules: the load station, where the loading of the wafers occurs; the furnace section, which is comprised of one to four thermal reactor chambers; and the gas distribution cabinet, where the flow of gases into the reactor chambers is controlled and is often configured through a range of options to meet the requirements of our customers' particular process needs. The horizontal furnaces utilize a combination of existing industry and proprietary technologies and are sold primarily to semiconductor customers. Our products are capable of processing all currently existing wafer sizes. These furnaces are manufactured in North America.

SEMICONDUCTOR FABRICATION SOLUTIONS PRODUCTS

Our Semiconductor Fabrication Solutions segment manufactures the products described below in Arizona, Pennsylvania, South Carolina and Connecticut and sells them under our Entrepix, PR Hoffman and Intersurface Dynamics brand names.

Substrate Polishing Templates. Our polishing templates are used to securely hold SiC, silicon, sapphire or other wafer materials in place during single-sided wax-free CMP polishing processes. Polishing templates are customized for specific applications and are manufactured to extremely tight tolerances. We offer a variety of options to provide the best solution for each specific process. Polishing templates are manufactured for all brands of tools and virtually any wax-free customer process. Critical front-end wafer surface specifications are finalized during the polishing process.

Substrate Carriers. We manufacture carriers in a variety of sizes and materials. Sizes range from 3 to 38 inches in diameter using a variety of special steels, laminates and extruded polymer raw materials. Silicon wafers, compound semiconductor wafers, and large optics require these special insert carriers. These carriers combine the strength of hardened steel as the processing backbone with a softer plastic material in the work holes known as an insert. Inserts are permanently molded into the work holes via a pressurized process. These inserted work holes

provide smoother processing, improved wafer total thickness variation (TTV) and improved wafer edge quality. Insert carriers are available for all wafer sizes from 75mm to 450mm and can be made from hardened and tempered carbon steel or specialized stainless steel when metal contamination is a processing concern. Insert carriers are widely accepted as the industry solution for both prime wafer and reclaim wafer manufacturers when dual sided lapping or polishing are utilized in the front-end wafer process.

Substrate Process Chemicals. Through Intersurface Dynamics, we produce and sell substrate process chemicals which are used to achieve specific surface morphologies on a variety of materials. Our substrate process chemical customers include some of the world's largest manufacturers of semiconductor devices, silicon wafers, precision optics, ophthalmic lens, advanced displays and flat glass. We offer three different product lines: Tensor Series Products, Vector Series Products, and Challenge Series Products. Tensor Series Products are used by manufacturers of integrated circuits in applications such as cleaning, etching, dicing and CMP. Vector Series Products were designed specifically for grinding, sawing, lapping, cleaning, etching and polishing semiconductor materials such as silicon wafers. Challenge Series Products address similar processes for manufacturers of precision optics, technical ceramics and advanced displays helping to achieve optimum yields.

Double-Sided Wafer Cleaning System. The Entrepix Double-Sided Wafer Cleaning System (OnTrak) is a single wafer cleaner that uses water or mild chemistries supplied through PVA brushes to clean both sides of a substrate simultaneously. These wafers (substrates) require cleaning following various process steps that leave the substrate contaminated by material particles. The system is designed to accept wet wafers in and send each substrate through two brush cleaning steps followed by a rinse and a spin dry while also providing heat via a high-powered lamp to dry any residual liquid droplets. The OnTrak system is commonly used in post polishing steps, prime silicon/silicon carbide cleaning, epitaxial silicon deposition processes, and general wafer cleaning needs.

Entegrity Head Tester. The Entrepix Entegrity Head Tester is a table-top CMP head testing system that provides our customers with invaluable data regarding their head consumables that make up the polishing heads. The system allows users to customize operation and recipe programming. This allows the user to test individual zones for leaks or cross talk and track each head's performance by generating data that can be used to track issues with head rebuild before it is installed on the polisher. The Entegrity's user friendly touch interface displays data in real time and also provides a live graph of the individual zone's performance. The ability to scan each head barcode prior to testing allows the user to create a data set for each specific head that can be viewed on the screen or downloaded via network connection.

CMP parts and Service. Entrepix offers a comprehensive range of replacement parts for chemical mechanical planarization (CMP) and cleaning equipment, supporting both current and legacy platforms. Entrepix provides engineered solutions to address obsolescence and increase tool reliability, including reverse-engineered assemblies and custom upgrades. Their capabilities extend to wafer carriers, cleaning modules, motor drivers, sensors, and control systems, with in-house prototyping and fabrication enabling rapid development of parts tailored to OEM or customer specifications.

MANUFACTURING, RAW MATERIALS AND SUPPLY CHAIN

Our Thermal Processing Equipment manufacturing activities consist primarily of engineering design to meet specific and evolving customer needs and procurement and assembly of various commercial and proprietary components into finished thermal processing systems in China or via our contract manufacturing partners in Canada and Singapore.

Our manufacturing activities in the polishing business include laser-cutting and other fabrication steps in producing lapping and polishing consumables, including carriers, templates, gears, wear items and spare parts in our ISO 9001:2015 certified facility in Pennsylvania from raw materials manufactured to our specifications by our suppliers. These products are engineered and designed for specific applications and to meet the increasingly tight tolerances required by our customers.

Our polishing supplies business relies on key suppliers for certain materials, including specialized steel mills in Germany and Japan, an injection molding machine, a single-sourced pad supplier from Japan and an adhesive manufacturer. Injection molding for our insert carriers is subcontracted out to a third party. To minimize the risk of

production and service interruptions and/or shortages of key parts, we seek to maintain appropriate inventory levels of key raw materials and parts.

Our cleaner manufacturing activities include electrical and mechanical assembly of components and assemblies for the construction of two versions of our double-side scrubbers/cleaners at our Phoenix facility. These components and assemblies are engineered and designed for specific applications and to meet the increasingly tight tolerances required by our customers. Many items are purchased from suppliers who manufacture these items to our specifications. Final assembly and tests of our machines are performed within our manufacturing facilities. Quality control is maintained through inspection of incoming materials and components, in-process inspection during equipment assembly, testing of assemblies and final inspection and, when practical, operation of manufactured equipment prior to shipment.

Intersurface Dynamics manufactures specialized chemical solutions for precision surface processing applications. Its product portfolio includes coolants, detergents, and slurries designed for grinding, lapping, polishing, cleaning, and dicing of substrates such as silicon, silicon carbide, sapphire, and advanced glass. These products support high-performance manufacturing in semiconductor, optics, and specialty materials industries.

During 2023, we partnered with contract manufacturers (“CM”) to improve our lead times and diversify our manufacturing operations. One CM is located in Canada and is building our high temperature belt furnaces. By partnering with this CM, we achieved record shipments of our high temperature belt furnaces. We also have partnered with a CM in Singapore, who will build our Pyramax furnaces and ship to our North American and European customers. In addition, we are using a CM partner as well as our Shanghai factory as backup sources to manufacture key components for certain high temperature belt furnaces. This CM strategy is key to ensuring we are not concentrated in one geographic location and to give us additional capacity during peak semiconductor cycles.

CUSTOMERS AND SEASONALITY

Our customers are primarily semiconductor chip packaging and electronic assembly companies, and manufacturers of semiconductor substrates, and devices. Additionally, our Semiconductor Fabrication Solutions segment also serves customers in the ceramics and optics industries. During 2025, 71% of our net revenue came from customers outside of North America. This group represented 59% of revenues in 2024. In 2025, net revenue was distributed among customers in the following geographic regions:

- North/South America 30% (27% of which is in the United States)
- Asia 55% (including 22% in China, 19% in Taiwan, 7% in Malaysia and 2% in Singapore)
- Europe 15% (including 2% in Germany, 2% in United Kingdom, 2% in Hungary and 2% in the Czech Republic)

No customer accounted for 10% of our net revenues in 2025 and 2024.

Our business is not seasonal in nature, but is cyclical based on the capital equipment investment patterns of semiconductor manufacturers. These expenditure patterns are based on many factors, including capacity utilization, anticipated demand, the development of new technologies and global and regional economic conditions. Historically, these cycles typically last between 10-17 quarters, with each complete cycle made up of a contraction phase of about 4-6 quarters, followed by an expansion phase of approximately 6-11 quarters. The mature node semiconductor market is currently in a longer-than-historical-average contraction cycle, which we believe is due primarily to a prolonged downturn in demand for personal computers and smartphones following a spike in demand for these products during the COVID pandemic and a reduction in anticipated growth rates for EVs.

SALES AND MARKETING

Due to the highly technical nature of our products, we market our products primarily by direct customer contact through our sales personnel and through a network of domestic and international independent sales representatives and distributors that specialize in semiconductor equipment and supplies. Our promotional activities include direct sales contacts, participation in trade shows, advertising and press releases in trade magazines and digital marketing including website SEO and pay-per-click advertising.

We use a mix of direct sales, representatives and distributors globally. Manufacturer representatives provide sales coverage in specific geographic regions and are paid a commission when products are sold. Sales to distributors are generally on terms comparable to sales to end-user customers, as our distributors generally quote their customers after first obtaining a quote from us and have an order from the end-user before placing an order with us. Our sales to distributors are not contingent on their future sales and do not include a general right of return. Historically, returns have been rare. Distributors of our semiconductor equipment do not stock a significant amount of our products, as the inventory they hold is generally limited to parts needed to provide timely repairs to customers. Our manufacturer representatives and distributors are closely managed by our global sales team.

RESEARCH, DEVELOPMENT AND ENGINEERING

The markets we serve are characterized by rapidly evolving industry standards and technological change. To compete effectively, we must continually maintain or exceed the pace of such change by improving our products and our process technologies and by developing new technologies and products that are competitive based on price and performance. To ensure that these technologies and products address current and future customer requirements, we obtain as much customer cooperation and input as possible, thus increasing the efficiency and effectiveness of our research and development efforts. In addition, we look for strategic acquisitions that will provide us with new technologies to compete effectively in the markets in which we operate.

RD&E expenses may vary from period to period depending on the engineering projects in process. Expenses related to engineers working on strategic projects or sustaining engineering projects are recorded in RD&E. However, from time to time we add functionality to our products or develop new products during engineering and manufacturing to fulfill specifications in a customer's order, in which case the cost of development, along with other costs of the order, are charged to cost of goods sold.

In 2025 and 2024, we recorded RD&E expense of \$2.6 million and \$4.2 million, respectively. We plan to continue to develop new products and invest in upgrades to existing products to stay competitive in the markets we serve.

COMPETITION

We compete in several distinct equipment markets for semiconductor devices, semiconductor substrates, MEMS, semiconductor packaging, and electronics assembly, as well as the markets for supplies used in power semiconductor applications. Each of these markets is highly competitive. Our ability to compete depends on our ability to continually improve our products, processes and services, as well as our ability to develop new products that meet constantly evolving customer technical and other requirements. Significant competitive factors for succeeding in these markets include the product's technical capability, productivity, cost-effectiveness, overall reliability, ease of use and maintenance, contamination and defect control and the level of technical service and support.

The Thermal Processing Solutions Market.

Our thermal processing equipment primarily competes with equipment produced by other OEMs. Our principal competitors for printed circuit board assembly equipment and advanced semiconductor packaging vary by product application. The principal competitors for solder reflow systems are ITW/EAE Vitronics-Soltec, Heller, Folungwin, ERSA, Shenzhen JT Automation Equipment Co., Ltd. and Rehm. The principal competitors for advanced semiconductor packaging are ITW/EAE Vitronics-Soltec and Heller. Some of these manufacturers are well-

established firms that are larger and have substantially greater financial and other resources. We believe our equipment is generally more expensive than our competitors but our advanced technology and excellent service has allowed us to gain a high market share of advanced packaging and assembly applications.

Competitors of our horizontal diffusion furnaces include Centrotherm GmbH and CVD Equipment, Inc. Our in-line, controlled atmosphere furnaces compete primarily against products offered by Centrotherm and SierraTherm/Schmid Thermal Systems. We also face competition from emerging low-cost Asian manufacturers and other established European manufacturers. We believe our equipment is generally more expensive than our competitors but our process capability, cost of ownership and after-sale support has allowed us to win business in competitive situations.

Semiconductor Fabrication Solutions Markets. Our CMP wafer carriers experience price competition from foreign manufacturers for which there is very little publicly available information. To maintain our competitive position, we work closely with customers to update our product line to keep pace with their requirements and provide a high level of quality and customer service. We also produce steel carriers, including insert carriers, on advanced laser-cutting tools, which reduce our costs and lead times and increases our control over quality.

Entrepix competes with other cleaning equipment providers including Screen and TEL with the OnTrak double-sided scrubber. The OnTrak is normally paired with a stand-alone CMP tool to match the throughput. The OnTrak competes with other cleaning technologies in several other applications like SiC substrate manufacturing and others that require particle removal from the surface of a device wafer.

Entrepix also competes with other companies specializing in refurbishment of older legacy CMP equipment. Competitors include Axus Technology and many other companies located in geographical regions such as China, South Korea and Taiwan. Entrepix's strategy consists of providing solutions for obsolete equipment for legacy 200mm, 300mm and smaller wafer processing equipment where support has been discontinued by the OEM. In addition, Entrepix provides support for their customers various wafer production and R&D requirements in their class 1000 clean room foundry.

The competitive landscape in the substrate process chemical industry is varied, ranging from large multinational companies to small regional or regionally focused companies. Intersurface Dynamics competes with much larger companies, such as Entegris, Inc. and Merck but focuses on niche applications and emerging substrate opportunities.

HUMAN CAPITAL

The Amtech Values

Amtech is focused on growth: profitable company growth and employee growth. To encourage achieving these objectives, Amtech's leadership team developed Amtech's core values, which are communicated to employees on a regular basis. These core values include the following:

- Safety – Employees should never be injured at work. Adherence to safety protocols underscores our commitment to disciplined operation.
- Customer Focus – We know our success depends on the success of our customers. We aim to exceed customer expectations at every interaction.
- Continuous Improvement – Our company's dedication to continuous improvement is what enables us to adapt, evolve, and excel in our ever-changing industry.

Amtech's Employees

Our employees are critical to our success as a leading, global manufacturer of capital equipment and related consumables used in fabricating and packaging semiconductor devices. To continue producing and delivering high-quality products and services to our customers, and to compete and succeed in the highly competitive and continually evolving markets in which we operate, it is critical that we continue to attract, retain and develop a diverse group of talented individuals at all levels of our organization.

Our management seeks to align employment levels with the needs of our business. As of September 30, 2025, we employed 264 people. We also employ individuals on a temporary full-time basis and use the services of contractors as necessary. Of our 264 total employees, 35% were engaged in manufacturing, 18% were engaged in sales and service, 12% were engaged in research, development and engineering, and 35% were engaged in other roles. Our employees were based out of the following locations:

- Tempe, Arizona corporate offices — 14
- Phoenix, Arizona manufacturing plants — 28
- Bethel, Connecticut manufacturing plant — 5
- Westford, Massachusetts manufacturing plant — 23
- Carlisle, Pennsylvania manufacturing plant — 24
- Shanghai, China manufacturing plant — 148
- Other Asia-Pacific sales and services offices — 14
- UK sales and services office — 8

Of the 24 people employed at our Carlisle, Pennsylvania facility, 16 were represented by the United Auto Workers Union - Local 1443. We had a three-year agreement with this union, which expired on September 30, 2025. During fiscal 2025 the parties to the agreement successfully negotiated a new 3-year agreement. The new agreement is valid from October 1, 2025, to September 30th, 2028. We have never experienced a work stoppage or strike, and other than employees at the Carlisle facility, no other employees are represented by a union. At select business units, we have hired certain highly specialized employees under employment contracts that specify a term of employment, pay and other benefits. We consider our employee relations to be good.

Talent Acquisition and Retention

The future growth and success of our company largely depends on our ability to attract, train and retain qualified professionals. As part of our effort to do so, we offer competitive rewards, compensation and benefits, including an employee equity award program, performance-based bonuses, health and wellness benefits, retirement benefits, flexible schedules and holiday and paid time off. We understand that competitive compensation and benefits programs are important in retaining high-performing and qualified individuals.

We know that retention of high-performing employees benefits us and our customers. We are committed to helping our employees develop in their careers and thrive within the Company. Management provides regular performance reviews to ensure our employees are receiving timely and constructive feedback, as well as rewards based on their performance. These performance reviews also assess each employee's performance as it relates to Amtech's core values. We believe these programs and efforts contribute to attracting and retaining a talented and driven workforce.

Turnover

In 2025, our total employee turnover was 33.1%, of which approximately 37.8% was voluntary. Approximately 2.0% of voluntary turnover were employees that retired from the workforce. The average tenure of our employees is approximately 11 years and approximately 48.5% of our employees have been employed with us for more than 10 years. In 2024, our total employee turnover was 26.2%, of which approximately 36.5% was voluntary. Approximately 7.3% of voluntary turnover were employees that retired from the workforce.

Throughout 2025 and 2024, we made targeted labor reductions as a result of our shift to contract manufacturing and the longer than expected slowdown in the broader semiconductor industry.

Diversity, Equity, and Inclusion

Amtech is dedicated to building a diverse workforce, fostering a culture built on the principle of inclusion, and maintaining a workplace free from discrimination. We strongly believe that a diversity of experience, perspectives and backgrounds will lead to a better environment for our employees and better products and service for our customers. Amtech's commitment to diversity covers our Board of Directors, our leadership team and all teams and functions across our global locations.

Health and Safety

It is our highest priority to keep our employees, customers and suppliers safe. We provide our employees with ongoing safety training to ensure safety policies and procedures are communicated and implemented in an effective and timely manner. As noted above, safety is one of our core values.

PATENTS

The following table shows our material patents and the expiration date of each patent:

Product	Countries	Expiration Date or Pending Approval
Ultrafast gas bearing-based reactive ion etching	Europe	2030
Lapping machine adjustable mechanism	Various	2027
RFID-containing carriers used for silicon wafer quality	United States	2030
Polishing machine wafer holder	Various	2037
Devices, Systems and Methods for Flux Removal from Furnace Process Gas	Various	2038

To our knowledge, there are currently no pending lawsuits against us regarding infringement of any existing patents or other intellectual property rights or any material unresolved claims made by third parties that allege we are infringing the intellectual property rights of such third parties.

AVAILABLE INFORMATION

We file our annual report on Form 10-K, quarterly reports on Form 10-Q, Current Reports on Form 8-K, proxy statements, and other documents (including registration statements) with the SEC under the Securities Exchange Act of 1934 or the Securities Act of 1933, as applicable. Our SEC filings are available to the public on the SEC's website at www.sec.gov and through The Nasdaq Global Select Market, 165 Broadway, New York, New York 10006, on which our common stock is listed.

AMTECH WEBSITE

In addition to the information contained in this Report, extensive information about Amtech can be found at www.amtechsystems.com, including information about our management team, products and services, and corporate governance practices. The corporate governance information on our website includes our Code of Conduct, Corporate Governance guidelines and the charters for each of the committees of the Board. In addition, amendments to these documents and waivers granted to directors and executive officers under the Code of Conduct, if any, will be posted in this area of the website. In addition, our filings with the SEC, as well as Section 16 filings made by any of our executive officers or directors with respect to Amtech's common stock, are available free of charge on our website as soon as reasonably practicable after the filing is electronically filed with, or furnished to, the SEC.

These details about our website and its content are only for information. The contents of our website are not, nor shall they be deemed to be, incorporated by reference in this Report. Further, our references to website URLs are intended to be inactive textual references only.

ITEM 1A. RISK FACTORS

There are many factors that affect our business, financial condition, operating results and cash flows, as well as the market price for our securities. The following is a description of important factors that may cause our actual results of operations in future periods to differ materially from those currently expected or discussed in forward-looking statements set forth in this Annual Report. The risks and uncertainties described below are not the only risks we face. We operate in a continually changing business environment. Additional risks and uncertainties not presently known to us or that we may currently deem immaterial also may impair our business operations. Forward-looking statements and such risks, uncertainties and other factors speak only as of the date of this Report, and we expressly disclaim any obligation or undertaking to update or revise any forward-looking statement contained herein, to reflect any change in our expectations with regard thereto, or any other change in events, conditions or circumstances on which any such statement is based, except to the extent otherwise required by law. The following risk factors should be read in conjunction with all the other information in this Annual Report, including “Management’s Discussion and Analysis of Financial Condition and Results of Operations” and our consolidated financial statements and related notes.

Risks Related to the Semiconductor Industry

There is ongoing volatility in the semiconductor equipment industry.

The semiconductor equipment industry is highly cyclical and volatile. As such, demand for, and the profitability of, our products can change significantly from period to period as a result of numerous factors, including the following: (a) changes in global and regional economic conditions; (b) the shift of semiconductor production to Asia, where there often is increased price competition; (c) tariffs, quotas and international trade barriers; (d) changes in capacity utilization and production volume of manufacturers of semiconductors, silicon wafers and MEMS; (e) the profitability and capital resources of those manufacturers; and (f) challenges associated with marketing and selling manufacturing equipment and services to a diverse and diffuse customer base.

The purchasing decisions of our customers are highly dependent on their capacity utilization, which changes when new facilities are put into production and with the level of demand for our products, as well as our customers’ capital expenditure budgets. Purchasing decisions are also impacted by changes in the economies of the countries served by our customers, as well as the state of the worldwide industries in which we operate or expect to operate in the future. The timing, length, and severity of the up-and-down cycles in the semiconductor equipment industry are difficult to predict. Additionally, we generally experience a one-to-two quarter lag between upturns/downturns experienced by larger equipment manufacturers.

When cyclical fluctuations result in lower than expected revenue levels, our operating results are adversely affected. Cost reduction measures may be necessary for us to remain competitive and financially sound. During a down cycle, our operating results may be adversely affected if we are unable to make timely adjustments to our cost and expense structure to correspond to the prevailing market conditions, effectively manage our supply chain, and motivate and retain key employees. In addition, during periods of rapid growth, our operating results may be adversely affected if we are unable to increase manufacturing capacity and personnel and effectively manage our supply chain to meet customer demand, which may require additional liquidity. We can provide no assurance that we can timely and effectively respond to the industry cycles, and our failure to do so could have a material adverse effect on our business, financial position and results of operations.

The semiconductor equipment industry is highly competitive and, because we are relatively small and have fewer financial and other resources compared to our competitors, we may not be able to compete successfully with them.

Our industry includes large manufacturers with substantial resources to support customers worldwide. Our future performance depends, in part, upon our ability to continue to compete successfully in these markets. Some of our competitors are diversified companies with extensive financial resources and research, engineering, manufacturing,

marketing and customer service and support capabilities that are greater than ours. We face competition from companies whose strategy is to provide a broad array of products, some of which compete with the products and services we offer. These competitors may bundle their products in a manner that discourages customers from purchasing our products. In addition, we face competition from emerging semiconductor equipment companies whose strategy is to provide a portion of the products and services that we offer often at a lower price than ours and use innovative technology to sell products into specialized markets. We also face competition from Chinese equipment manufacturers that may receive greater support than we do from Chinese customers and governmental agencies because they are locally based. In addition, our local Chinese competitors may offer lower prices and more liberal payment terms than ours. Loss of our competitive position due to any of these factors could impair our prices, customer orders, revenue, gross margin, and market share, any of which would negatively affect our business, financial position and results of operations.

Risks Related to Our Business

We may not be able to generate sufficient cash flows or obtain access to external financing necessary to fund existing operations and our growth plan.

Our cash flows may be insufficient to provide adequate working capital in the future and we may require additional financing to fund existing operations as well as any growth plans. We paid off and terminated our existing credit facility with UMB Bank in September 2024. There is no assurance that we will be able to replace such facility or that any additional financing will be available if required, or, even if available, that it would not materially dilute the ownership percentage of our then existing shareholders, result in increased expenses or result in covenants or special rights that would restrict our operations.

We may not be able to manage our business successfully through severe business cycles.

We may be unable to successfully expand or contract our business to meet fluctuating demands. Market fluctuations place significant strain on our management, personnel, systems, and resources. To successfully manage our growth through such market fluctuations, we believe we must effectively: (a) maintain the appropriate number and mix of permanent, part-time, temporary and contract employees to meet the fluctuating demand for our products; (b) train, integrate and manage personnel, particularly process engineers, field service engineers, sales and marketing personnel, and financial and information technology personnel to maintain and improve skills and morale; (c) retain key management and augment our management team, particularly if we lose key members; (d) continue to enhance our customer resource and manufacturing management systems to maintain high levels of customer satisfaction and efficiencies, including inventory control; (e) manage our existing contract manufacturers and those we engage in the future, (f) implement and improve existing and new administrative, financial and operations systems, procedures and controls; (g) expand and upgrade our technological capabilities; and (h) manage multiple relationships with our customers, suppliers and other third parties.

We may encounter difficulties in effectively managing the budgeting, forecasting and other process control issues presented by rapidly changing business cycles. If we are unable to effectively manage our business through these cycles, we may not be able to take advantage of market opportunities, develop new technologies and other products, satisfy customer requirements, execute our business plan or respond to competitive pressures.

Our inability to attract, train and retain effective employees and management could harm our business.

Our success depends upon the continued contributions of our executive officers, general managers, business unit directors and certain other employees, many of whom have many years of experience with us and would be extremely difficult to replace. We must also attract and retain experienced and highly skilled engineering, sales and marketing and managerial personnel. Competition for qualified personnel is intense in our industry, and we may not be successful in hiring and retaining these people. If we lost the services of our executive officers or our other highly qualified and experienced employees or cannot attract and retain other qualified personnel, our business could suffer as a result of less effective management due to loss of accumulated knowledge of our business or through less successful products due to a reduced ability to design, manufacture and market our products.

We may be unable to implement certain business strategies and any issue with the pursuit of such business strategies could materially adversely affect our business and results of operations.

We may from time to time determine to implement business strategies and restructuring initiatives in order to remain competitive. Because our strategies and restructuring activities may involve changes to many aspects of our business, including the location of our production facilities, the use of contract manufactures, and the potential exit of certain product lines and businesses, our ability to successfully do so depends on a number of factors, many of which are outside of our control. If we are not able to effectively manage or efficiently implement these strategies and/or restructuring initiatives for reasons within or outside of our control, then our business operations could be materially adversely affected.

In addition, implementation of a new business strategy may lead to the disruption of our existing business operations. For example, the contingent risks associated with outsourcing certain of our existing manufacturing operations to third parties, as is the case with our use of third party manufacturers, primarily in Canada and Mexico, could materially impact our financial condition or results of operations and/or could disrupt our existing operations, especially if a contract manufacturer is unable to meet its commitments under any agreements or encounters financial difficulty. Furthermore, our efforts to outsource certain of our manufacturing operations may require additional management time and effort to implement successfully, and lead to higher than anticipated capital expenditures.

The failure to successfully and timely realize the anticipated benefits of these transactions or strategies could have a material adverse effect on our profitability, financial condition or results of operations. In addition, even if we fully execute and implement these activities, there may be other unforeseeable and unintended consequences that could materially adversely impact our profitability and business, including unintended employee attrition or harm to our competitive position. To the extent that we do not achieve the profitability enhancement or other anticipated benefits of strategy or restructuring initiatives, our results of operations may be materially adversely affected.

We may be unable to successfully acquire and integrate new operations, which could cause our business to suffer.

We periodically evaluate potential acquisitions and consider acquisitions an important part of our future growth strategy. In the past, we have made acquisitions of, or significant investments in, other businesses with synergistic products, services and technologies and plan to continue to do so in the future. There can be no assurance that we will be able to identify suitable acquisition opportunities in the future or that we will be able to consummate any such transactions on terms and conditions acceptable to us.

Additionally, we cannot predict if or when acquisitions will be completed, and we may face significant competition for acquisition targets. Acquisitions involve numerous risks, including: (a) difficulties in integrating the operations, technologies, management information systems, products and personnel of the acquired companies; (b) diversion of management's time and attention from normal daily operations of the business; (c) loss of key employees of an acquired business; (d) difficulties in entering markets in which we have no or limited prior experience and where our competitors in such markets have stronger market positions; (e) difficulties in complying with regulations, such as antitrust and environmental regulations, and managing risks related to an acquired business; (f) an inability to timely obtain any required financing; (g) an inability to implement uniform standards, controls, procedures and policies; (h) undiscovered and unknown problems, defects, liabilities or other issues related to any acquisition that become known to us only after the acquisition; and (i) loss of key customers or suppliers. Any of these risks could have a material adverse effect on our business, results of operations, financial condition, or cash flows, particularly in the case of a large acquisition.

Our reliance on sales to a few major customers, often on credit terms, places us at financial risk.

We currently sell to a relatively small number of customers and expect to do so for the foreseeable future. Therefore, our operating results depend on the ability of these customers to sell products that require our equipment in their manufacturing operations. Many of our customer relationships have developed over a short period of time and certain ones are in the early stages of development. The loss of sales to any of these customers would have a

significant negative impact on our business. Additionally, our customers may cancel their agreements or orders with us if we fail to meet certain product specifications, materially breach agreements or encounter insolvency or bankruptcy. Any such cancellations may result in inventory that we may not be able to quickly resell. They also may seek to renegotiate the terms of current agreements or renewals. We cannot be certain our existing customers will generate significant revenue for us in the future or that these new customer relationships will be maintained or continue to develop. If we are unable to maintain or expand our customer base, we may not be able to maintain or increase our revenue.

In addition to having a relatively limited number of customers, we manufacture a limited number of products for each of our customers. If we lose any of our largest customers (as we have in the past from time to time), experience a significant reduction in sales to any such customers or no longer manufacture a particular product line for one of our largest customers, we will experience a significant reduction in our revenue.

As of September 30, 2025, two Thermal Processing Solutions customer represented 15% and 13% of our accounts receivable. A concentration of our receivables from one or a small number of customers places us at risk. A significant change in the liquidity or financial position of any of our customers that purchase large systems could have a material impact on the collectability of our accounts receivable and our future operating results. We attempt to manage this credit risk by requiring significant partial payments prior to shipment, where appropriate, and by actively monitoring collections. We also require letters of credit from certain customers depending on the size of the order, type of customer or its creditworthiness and its country of domicile. Our major customers may seek and, on occasion, may receive pricing, payment or other commercial terms that are less favorable to us than the current terms we customarily obtain. If any one or more of our major customers were to seek to re-negotiate their agreements on more favorable terms, or not pay us or continue business with us, it could adversely affect our business, financial position and results of operations.

Manufacturing interruptions or delays could affect our ability to meet customer demand and lead to higher costs.

Our business depends on timely supply of parts, services and related products that meet the rapidly changing technical and volume requirements of our customers. Some key parts to our products are subject to long lead times and/or are obtainable only from a single supplier or limited group of suppliers. Cyclical industry conditions and the volatility of demand for manufacturing equipment increase capital, technical, operational and other risks for us and for companies throughout our supply chain. Further, these conditions may cause some suppliers to scale back operations, exit businesses, merge with other companies, file for bankruptcy protection or possibly cease operations. We also may experience significant interruptions of our manufacturing operations, delays in our ability to deliver products or services or increased costs as a result of any of the following: (a) the failure or inability of suppliers to deliver sufficient quantities of quality parts on a cost-effective and timely basis; (b) volatility in the availability and cost of materials, including rare earth elements; (c) difficulties or delays in obtaining required import or export approvals; (d) information technology or infrastructure failures; and (e) natural disasters or other events beyond our control (such as earthquakes, floods or storms, regional economic downturns, pandemics, social unrest, political instability, terrorism, or acts of war), particularly where we conduct manufacturing operations.

We use third parties for certain of our manufacturing activities. If our contract manufacturers do not perform effectively, we may not be able to achieve the expected cost savings and may incur additional costs to correct errors or fulfill customer demand. Depending on the function involved, such errors may also lead to business disruption, processing inefficiencies, the loss of or damage to intellectual property through security breach, or an impact on employee morale. Our operations may also be negatively impacted if any of these contract manufacturers do not have the financial capability to meet our growing needs.

There are also inherent execution risks in starting up a new factory or expanding production capacity, whether one of our own factories or that of our contract manufacturers, as well as risks to moving production to different contract manufacturers, which could increase costs and reduce our operating results. We are currently working with contract manufacturer facilities in Canada. The establishment and operation of new manufacturing facilities or contract manufacturing involves significant risks and challenges, some of which we have experienced and may experience in the future, including, but not limited to, the following: (a) design and construction delays and cost overruns; (b) issues in installing and qualifying new equipment and ramping production; (c) poor production process yields and

reduced quality control; and (d) insufficient personnel with requisite expertise and experience to operate a manufacturing facility for the products we manufacture.

Because we depend on revenue from international customers, our business may be adversely affected by changes in the economies and policies of the countries or regions in which we do business.

In 2025, 71% of our net revenue came from customers outside of North America as follows: Asia - 55% (including China - 22%, Taiwan - 19%, Malaysia - 7% and Singapore - 2%); and Europe - 15% (including Germany - 2%, United Kingdom - 2%, Hungary - 2% and Czech Republic - 2%).

Each geographic region in which we, our customers, and our suppliers operate exhibits unique characteristics that can cause capital equipment investment patterns to vary significantly from period to period. Our business and results of operations could be negatively affected by periodic local or international economic downturns, trade balance issues and political, social and military instability in countries such as China, Russia, India, South Korea, Taiwan, Ukraine and possibly elsewhere. In addition, we face competition from a number of suppliers based in Asia that have certain advantages over suppliers from outside of Asia. These advantages include lower operating, shipping and regulatory costs, proximity to customers, favorable tariffs and other government policies that favor local suppliers. Additionally, the marketing and sale of our products to international markets expose us to a number of risks, including the following: (a) increased costs associated with maintaining the ability to understand the local markets and follow their trends and customs, as well as developing and maintaining an effective marketing and distributing presence; (b) limitations on our ability to require advance payments from our customers; (c) difficulty in providing customer service and support in local markets; (d) difficulty in staffing and managing overseas operations; (e) longer sales cycles and collection periods; (f) fewer or weaker legal protections for our intellectual property rights; (g) failure to develop appropriate risk management and internal control structures tailored to overseas operations; (h) difficulty and costs relating to compliance with the different or changing commercial and legal requirements of our overseas markets; (i) fluctuations in foreign currency exchange and interest rates; (j) failure to obtain or maintain certifications for our products or services in these markets; and (k) international trade barriers such as export requirements, tariffs, taxes and other restrictions and expenses.

Our business may be adversely affected by significant exchange rate fluctuations.

Though our business has not been materially affected in the past by currency fluctuations, there is a risk that it may be materially adversely affected in the future. Such risk includes possible losses due to currency exchange rate fluctuations, future prohibitions against repatriation of earnings, or proceeds from disposition of investments.

We are exposed to risks associated with an uncertain global economy.

Uncertain global economic conditions and slowing growth in China, Europe and the United States, along with difficulties in the financial markets, national debt concerns and government austerity measures in certain regions, pose challenges to the industries in which we operate. Related factors, including unemployment, inflation and fuel prices, exacerbate negative trends in business and consumer spending and may cause our customers to delay, cancel, or refrain from placing orders for equipment or services. These actions may, in turn, reduce our net sales, reduce backlog, and negatively affect our ability to convert backlog to sales. Uncertain market conditions, difficulties in obtaining capital, or reduced profitability also may cause some customers to scale back operations, exit businesses, merge with other manufacturers, or file for bankruptcy protection and potentially cease operations, which can result in lower sales and/or additional inventory or bad debt expense for us. These conditions may similarly affect key suppliers, impairing their ability to deliver parts and potentially causing delays or added costs for delivery of our products. In addition, these conditions may lead to strategic alliances by, or consolidation of, other equipment manufacturers, which could adversely affect our ability to compete effectively. Uncertainty about future economic and industry conditions also makes it more challenging for us to forecast our operating results, make business decisions, and identify and prioritize the risks that may affect our businesses, sources and uses of cash, financial condition and results of operations. We may be required to implement additional cost reduction efforts, including restructuring activities, and/or modify our business model, which may adversely affect our ability to capitalize on opportunities in a market recovery. If we do not timely and appropriately adapt to changes resulting from these uncertain macroeconomic and industry conditions, or to difficulties in the financial markets, our business, financial condition and results of operations may be materially and adversely affected.

If we fail to maintain optimal inventory levels, our inventory obsolescence costs could increase, our liquidity could be significantly reduced, or our revenue could decrease.

While we must maintain sufficient inventory levels to operate our business successfully, meet our customers' demands, and mitigate the possible impact of supply chain issues, accumulating excess inventory may have a significant unfavorable impact on our operating results and financial condition. Changing customer demands, supplier lead times and uncertainty surrounding new product launches expose us to risks associated with excess inventory or shortages. Our products are manufactured using a wide variety of purchased parts and raw materials and we must maintain sufficient inventory levels to meet the demand for the products we sell, which can change rapidly and unexpectedly. During peak years of our business, increases in demand for capital equipment result in longer lead times for many important system components. Future increases in demand could cause delays in meeting the shipment requirements or expectations of our customers. Because of the variability and uniqueness of customer orders, we seek to avoid maintaining an extensive inventory of materials for manufacturing. However, long lead times for important system components during industry upturns sometimes require us to carry higher levels of inventory and make larger purchase commitments than we otherwise would make. We may be unable to sell sufficient quantities of products if market demand changes, resulting in increased risk of excess inventory that could lead to obsolescence or reduced liquidity as we fulfill our purchase commitments. Conversely, if we do not have a sufficient inventory of a product to fulfill customer orders, we may lose orders or customers, which may adversely affect our business, financial condition and results of operations. We may not be able to accurately predict market demand to avoid inventory shortages or build inventories and issue purchase commitments in excess of our current requirements.

Supplier capacity constraints, supplier production disruptions, supplier quality issues or price increases could increase our operating costs and adversely impact the competitive positions of our products.

We use numerous suppliers covering a wide range of materials and services in the production of our products including custom electronic and mechanical components. Key vendors include suppliers of controllers, quartz and silicon carbide for our diffusion systems, steel mills capable of producing the types of steel to the tolerances needed for our wafer carriers, an injection molding machine that molds plastic inserts into our steel carriers, an adhesive manufacturer that supplies the critical glue and a pad supplier that produces a unique material used in the manufacture of our polishing templates. We also rely on third parties for certain machined parts, steel frames and metal panels and other components used particularly in the assembly of our production equipment. Although we strive to ensure that parts are available from multiple suppliers, we procure some key parts from a single supplier or a limited number of suppliers. Thus, at times, certain parts may not be available in sufficient quantities, or on a timely and cost-efficient basis, to adequately meet our needs and the needs of our customers.

In the event of supplier capacity constraints, production disruptions, or failure to meet our requirements concerning quality, cost or performance factors, we may seek to transfer our business to alternative sourcing which could lead to further delays, additional costs or other difficulties. If, in the future, we do not receive, in a timely and cost-effective manner, a sufficient quantity and quality of parts to meet our production requirements, our business, financial position and results of operations may be materially and adversely affected.

Our income taxes are subject to variables beyond our control.

Our net income and cash flow may be adversely affected by conditions affecting income taxes which are outside our control. Examples of the potential uncontrollable circumstances that could affect our tax rate are as follows:

- We sell and operate globally in the United States, Europe and Asia. Disagreement could occur on the jurisdiction of income and taxation among different governmental tax authorities. Potential areas of dispute may include transfer pricing, intercompany charges and intercompany balances.
- We are subject to a Chinese withholding tax on certain non-tangible charges made under our transfer pricing agreements. The interpretation of what charges are subject to the tax and when the liability for the tax occurs has varied and could change in the future.
- Tax rates may increase, or new tax rates may be implemented (i.e., a global minimum rate), and, therefore, have a material adverse effect on our earnings and cash flows.

Natural disasters, outbreaks of infectious diseases, terrorist attacks, wars and threats of war may negatively impact our operations, revenue, costs, and stock price.

Natural disasters such as earthquakes, floods, severe weather conditions, outbreaks of infectious diseases in addition to COVID-19 or other catastrophic events may severely affect our operations or those of our suppliers and customers. Acts of terrorism, as well as events occurring in response or connection to them, including potential future terrorist attacks, rumors or threats of war, actual military conflicts or trade disruptions impacting our domestic or foreign customers or suppliers, may negatively impact our operations by causing, among other things, delays, or losses in the delivery of supplies or finished goods and decreased sales of our products. More generally, any of these events could cause consumer confidence and spending to decrease and/or result in increased volatility in the worldwide financial markets and economy. They also could result in economic recession either globally or in the markets in which we operate. Any of these occurrences could have a significant adverse impact on our business, financial position and results of operations.

We maintain cash deposits in excess of federally insured limits. Adverse developments affecting financial institutions, including bank failures, could adversely affect our liquidity and financial performance.

We maintain domestic cash deposits in Federal Deposit Insurance Corporation (“FDIC”) insured banks that exceed the FDIC insurance limits. We also maintain cash deposits in foreign banks where we operate, some of which are not insured or are only partially insured by the FDIC or similar agencies. Bank failures, events involving limited liquidity, defaults, non-performance, or other adverse developments that affect financial institutions, or concerns or rumors about such events, may lead to liquidity constraints. The failure of a bank, or other adverse conditions in the financial or credit markets impacting financial institutions at which we maintain balances, could adversely impact our liquidity and financial performance. There can be no assurance that our deposits in excess of the FDIC or other comparable insurance limits will be backstopped by the U.S. or applicable foreign government, or that any bank or financial institution with which we do business will be able to obtain needed liquidity from other banks, government institutions, or by acquisition in the event of a failure or liquidity crisis.

In the past we have identified material weaknesses in our internal control over financial reporting which, if not remediated, could result in material misstatements in our financial statements.

In fiscal 2023, we identified a material weakness in internal control related to ineffective information technology general controls in the areas of user access, segregation of duties, and program change-management over information technology systems that support substantially all of the Company’s financial reporting processes. This resulted in our inability to segregate user duties within the Company’s business processes. A substantial portion of the Company’s controls are dependent upon the information derived from the information technology systems and therefore the dependent controls were concluded to be ineffective. A material weakness is a deficiency, or combination of deficiencies, in internal control over financial reporting such that there is a reasonable possibility that a material misstatement of our annual consolidated financial statements will not be prevented or detected on a timely basis.

Additionally, in fiscal 2023, we identified a material weakness because we did not design and maintain adequate internal controls over non-routine and complex transactions, including the preparation and review of the third-party service provider valuation reports in the areas of goodwill and intangible assets.

In fiscal 2024, our management, under the oversight of our Audit Committee, began designing and implementing measures designed to remediate the control deficiencies contributing to these material weaknesses. The material weaknesses are considered remediated once all necessary internal controls have been implemented, tested and determined to be operating effectively for a sufficient period of time, which we concluded occurred as of September 30, 2024. Notwithstanding the remediation of the control deficiencies, we cannot assure you that we will not identify additional material weaknesses in our internal control over financial reporting in the future. If we are unable to remediate the material weaknesses, our ability to record, process and report financial information accurately, and to prepare financial statements with the time periods specified by the rules and forms of the Securities and Exchange Commission, could be adversely affected. This failure could negatively affect the market price and trading liquidity of our common stock, cause investors to lose confidence in our reported financial information, subject us to civil and

criminal investigations and penalties and generally materially and adversely impact our business and financial condition.

Continued changes in corporate governance requirements, policies and practices may impact our business.

Corporate governance, public disclosure and compliance practices continue to evolve based upon continuing legislative action, SEC rulemaking and policy positions taken by large institutional stockholders and proxy advisors. As a result, the number of rules, regulations and standards applicable to us may become more burdensome to comply with, could increase scrutiny of our practices and policies by these or other groups and increase our legal and financial compliance costs and the amount of time management must devote to governance and compliance activities. For example, the SEC has recently adopted rules requiring that issuers provide significantly increased disclosures concerning cybersecurity risk management, strategy, governance and incident reporting and adopt more stringent executive compensation clawback policies. Increasing regulatory burdens and corporate governance requirements could make it more difficult for us to attract and retain qualified members of our Board and qualified executive officers.

Risks Related to Regulations and Litigation

We are subject to various laws and regulations, including recent pronouncements related to laws and regulations governing climate related disclosures, cybersecurity, privacy, anti-corruption and the environment. Obligations and liabilities under these laws and regulations may materially harm our business.

Our operations are subject to an array of governmental regulations in each of the jurisdictions in which we operate, including taxation policies, governance and audit requirements, employment and labor laws, environmental regulations, transportation regulations, import and export regulations and tariffs, possible foreign exchange restrictions and international monetary fluctuations. Noncompliance with applicable regulations, implementation of new regulations or modifications to existing regulations may increase costs of compliance, require a termination of certain activities or otherwise materially adversely affect our business, results of operations and financial condition.

Climate Disclosure, Cybersecurity and Other Pronouncements - Pronouncements by the SEC, Federal Trade Commission, Department of Justice, and from the state of California, among others, related to antitrust, climate related disclosures, cybersecurity and privacy could have the impact of increasing Company compliance costs, increasing potential liability to the Company as a result of frivolous lawsuits, or place the Company in a position of not knowing when or if the laws are settled in a particular area in order for the Company to effectively comply.

Anti-Corruption Laws and Regulations - We are a U.S.-based multinational company with extensive operations in Asia and elsewhere. We operate in several high-risk jurisdictions, including, but not limited to China. Various U.S. and certain non-U.S. anti-corruption/anti-bribery and other international trade laws and regulations apply to us and our businesses. These laws and regulations may include, among others, the Foreign Corrupt Practices Act of 1977, as amended, the U.S. Travel Act, domestic anti-corruption laws such as 18 U.S.C. §201, the Money Laundering Control Act of 1986, the USA PATRIOT Act, the U.S. Export Control Reform Act of 2018, the U.S. Export Administration Regulations (15 C.F.R. §§730 et seq.), U.S. sanctions contained in 31 C.F.R. Parts 500-599, the U.S. International Emergency Economic Powers Act, the U.S. Trading with the Enemy Act, the International Boycott Provisions (Section 999) of the U.S. Internal Revenue Code, the UK Bribery Act 2010, the UK Proceeds of Crime Act 2002, and certain other anti-corruption, anti-bribery, anti-kickback, anti-fraud, anti-money laundering, anti-terrorist financing, anti-narcotics, anti-boycott, export control, sanctions, embargo, import control, customs, tax, insider trading, insurance, banking, false claims, anti-racketeering, and other laws, regulations, decrees, government or executive orders, or judicial or administrative decisions or determinations to the extent applicable.

These laws and regulations are interpreted very broadly and will impact and raise legal compliance risks for our business in the various jurisdictions where we operate. Violations of any of these laws and regulations may result in substantial civil and/or criminal fines and penalties, imprisonment, the loss of export or import privileges, debarment, tax reassessments, breach of contract and fraud litigation, reputational harm, and other consequences.

Anti-corruption/anti-bribery and the other laws and regulations referenced above are actively enforced by U.S. and other government agencies. Among various matters, anti-corruption/anti-bribery laws prohibit our companies,

subsidiaries, directors, officers, employees, and business partners, as well as third parties acting for or on our behalf, from authorizing, promising, offering, providing, soliciting, or accepting, whether directly or indirectly, improper payments or anything else of value to or from recipients in the public or private sector. We may engage vendors and third-party business partners to sell our products or services and/or to obtain necessary permits, licenses, patent registrations, and other regulatory approvals. We have direct or indirect interactions with officials and employees of government agencies or government-affiliated organizations. These activities raise our anti-corruption/anti-bribery risk exposure. We can be held liable for the corrupt or other illegal activities of our officers, directors, employees, and business partners, as well as the conduct of third parties acting for or on our behalf, even if we do not explicitly authorize or have actual knowledge of their misconduct. The application of these laws to us also may place us at a competitive disadvantage to foreign companies that are not subject to similar laws/regulations.

Environmental Laws and Regulations - We are subject to a variety of national, state, regional and local environmental laws and regulations. Among other things, these laws and regulations impose limitations and prohibitions on the discharge and emission of, and establish standards for the use, disposal and management of, regulated materials and waste and impose liabilities for the costs of investigating and cleaning up, and damages resulting from, present and past spills, disposals or other releases of hazardous substances or materials. In the ordinary course of business, we use and generate substances that are regulated or may be hazardous under environmental laws. We have an inherent risk of liability under environmental laws and regulations, both with respect to ongoing operations and with respect to contamination that may have occurred in the past on our properties or as a result of our operations. While we endeavor to comply with all regulatory requirements, from time to time, our operations or conditions on properties that we have acquired have resulted in liabilities under these environmental laws. We may in the future incur material costs to comply with environmental laws or sustain material liabilities from claims concerning noncompliance or contamination. Under certain environmental laws, we could be held responsible for all the costs relating to any contamination at, or migration to or from, our or our predecessors' past or present facilities. These laws often impose liability even if the owner, operator or lessor did not know of, or was not responsible for, the release of such hazardous substances. While we maintain certain related insurance coverages, we have no reserves for any such liabilities.

We are also required to obtain environmental permits from governmental authorities for certain of our operations. If we violate or fail to obtain or comply with these laws, regulations, or permits, we could be fined or otherwise sanctioned by regulators. We could also become liable if employees or other parties are improperly exposed to hazardous materials.

We cannot predict what environmental legislation or regulations will be enacted in the future, how existing or future laws or regulations will be administered or interpreted, or what environmental conditions may be found to exist at our facilities or at third party sites for which we may be liable. Enactment of stricter laws or regulations, stricter interpretations of existing laws and regulations or the requirement to undertake the investigation or remediation of currently unknown environmental contamination at sites we own or third-party sites may require us to make additional expenditures, some of which could be material. Responding to governmental investigations or other actions may be both time-consuming and disruptive to our operations and could divert the attention of our management and key personnel from our business operations. The impact of these and other investigations and lawsuits could have a material adverse effect on our financial statements.

The United States could withdraw from or materially modify certain international trade agreements, or change tariff, trade, or tax provisions related to the global manufacturing and sales of our products in ways that we currently cannot predict.

A portion of our business activities are conducted in foreign countries, including China, Malaysia and Taiwan. Our business benefits from free trade agreements, and we also rely on various U.S. corporate tax provisions related to international commerce as we build, market and sell our products globally. Changes in U.S. or international social, political, regulatory and economic conditions could impact our business, reputation, financial condition and results of operations. Political and economic instability, geopolitical conflicts, political unrest, civil strife, terrorist activity, acts of war, public corruption, expropriation, nationalism and other economic or political uncertainties in the United States or internationally could interrupt and negatively affect the sale of our products or other business operations. Any negative sentiment toward the United States as a result of any such changes could also adversely affect our business. In addition, changes in laws and policies governing foreign trade, manufacturing, development and investment in the territories or countries where we currently sell our products or conduct our business could

adversely affect our business. U.S. presidential administrations have instituted or proposed changes in trade policies that include the negotiation or termination of trade agreements, the imposition of higher tariffs on imports into the U.S., economic sanctions on individuals, corporations or countries, and other government regulations affecting trade between the U.S. and other countries where we conduct our business. It may be time-consuming and expensive for us to alter our business operations to adapt to or comply with any such changes. Changes or proposed changes in U.S. or other countries' trade policies may result in restrictions and economic disincentives on international trade. Tariffs and other changes in U.S. trade policy have in the past and could in the future trigger retaliatory actions by affected countries, and certain foreign governments have instituted or are considering imposing retaliatory measures on certain U.S. goods. Further, any emerging protectionist or nationalist trends either in the United States or in other countries could affect the trade environment. Amtech, like many other multinational corporations, does a significant amount of business that would be impacted by changes to the trade policies of the United States and foreign countries (including governmental action related to tariffs, international trade agreements, or economic sanctions). Such changes have the potential to adversely impact the U.S. economy or certain sectors thereof or the economy of another country in which we conduct operations, our industry and the global demand for our products, and as a result, could have a material adverse effect on our business, financial condition and results of operations. We are continuing to evaluate the impact of the announced and other proposed tariffs on products that we import from China, and we may experience a material increase in the cost of our products, which may result in our products becoming less attractive relative to products offered by our competitors.

These developments, or the perception that any of them could occur, may have a material adverse effect on global economic conditions and the stability of global financial markets, and may significantly reduce global trade and, in particular, trade between the impacted nations and the United States. Any of these factors, or any changes to U.S. corporate tax policies related to international commerce, could depress economic activity and have a material adverse effect on our business, financial condition and results of operations.

We are subject to expanded export control restrictions adopted by the U.S. Department of Commerce's Bureau of Industry and Security that could negatively impact our business in China.

The United States and certain other countries in which we do business maintain government controls that may restrict our ability to import or export our products and services or increase the cost of our operations through the imposition of tariffs, new controls, outright bans, or otherwise, that could harm our business and negatively impact our financial position and results of operations. For example, the U.S. Department of Commerce has added and continues to add numerous China-based entities to the U.S. Entity List, including many entities active in the semiconductor industry in China, restricting our ability to provide products and services to such entities without an export license. Even if we apply for licenses to sell our products or provide services to companies on the U.S. Entity List, there can be no assurance that licenses will be granted. In addition, the U.S. Department of Commerce has imposed new export licensing requirements on exports to China-based customers engaged in development or production in China of advanced semiconductors and supercomputers, military end uses, support for military end users, or where Commerce has determined there is a risk of diversion to a military end use, as well as requiring our customers to obtain export licenses when they use certain semiconductor capital equipment based on U.S. technology to manufacture products connected to certain entities on the U.S. Entity List. The U.S. Department of Commerce has also imposed restrictions on the activities of U.S. persons supporting or facilitating transactions with projects in China for the development or production of advanced semiconductors and supercomputers. To date, these new rules have not significantly impacted our operations, but we are continually monitoring their impact. If additional companies are added to the U.S. Entity List, or other licensing requirements or restrictions are imposed, thereby limiting our ability to sell our products or services to other customers in China, our business could be significantly harmed. Similar actions by the U.S. government or another country could impact our ability to provide our products and services to existing and potential customers.

We face a risk of product liability claims or other litigation, which could be expensive and may divert management's attention from running our business.

Amtech and our subsidiaries are defendants from time to time in actions for matters arising out of our business operations. The manufacture and sale of our products, which, in our customers' operations, involve toxic materials and robotic machinery, involve the risk of product liability claims. In addition, a failure of one of our products at a customer site could interrupt the business operations of our customer. Our existing insurance coverage limits may not be adequate to protect us from all liabilities that we might incur in connection with the manufacture and sale of

our products if a successful product liability claim or series of product liability claims were brought against us. As of September 30, 2025 and 2024, our accrued warranty costs amounted to \$0.4 million and \$0.6 million, respectively. Our assumptions regarding the durability and reliability of our products may not be accurate, and because our products have relatively long warranty periods, we cannot assure you that the amount of accrued warranty by us for our products will be adequate considering the actual performance of our products or that we won't experience higher than expected warranty claims. If we experience a significant increase in warranty claims, we may incur significant repair and replacement costs associated with such claims. Furthermore, widespread product underperformances or failures will damage our reputation and customer relationships and may cause our sales to decline, which in turn could have a material adverse effect on our business, financial condition and results of operations.

We also may be involved in other legal proceedings or claims and experience threats of legal action from time to time in the ordinary course of our business. For example, securities class action litigation is often brought against companies following periods of volatility in the market price of its securities or in connection with strategic transactions. We may in the future be the target of securities litigation due to volatility in the market price of our common stock or for other reasons. Any securities litigation could result in substantial costs and could divert the attention and resources of our management.

Where appropriate, we intend to vigorously defend all claims. However, any actual or threatened claims, even if not meritorious or material, could result in the expenditure of significant financial and managerial resources. The continued defense of these claims and other types of lawsuits could divert management's attention away from running our business. In addition, amounts required to be paid in settlement of any claims, and the legal fees and other costs associated with their defense or settlement, cannot be estimated and could, individually or in the aggregate, materially harm our financial condition.

Social and environmental responsibility regulations, policies and provisions, as well as customer and investor demands, may make our supply chain more complex and may adversely affect our relationships with customers and investors.

With the increasing focus on corporate social and environmental responsibility in the semiconductor industry, a number of our customers have adopted, or may adopt, procurement policies that include social and environmental responsibility provisions or requirements that their suppliers should comply with, or they may seek to include such provisions or requirements in their procurement terms and conditions. We may face difficulties in satisfying these customers' demands, which may harm our sales and operating results.

Many investors also expect companies to disclose corporate social and environmental policies, practices and metrics under voluntary disclosure standards and frameworks. We periodically communicate our strategies, goals and targets related to our corporate social and environmental policies and programs. These strategies, goals and targets, and their underlying assumptions and projections, reflect our current plans and aspirations, but we may be unable to achieve them. It is also possible that our investors might not be satisfied with our policies, programs, goals, performance and related disclosures, or the speed of their adoption, implementation and measurable success, or that we have adopted such policies, programs and commitments at all.

In addition, unfavorable ratings or assessment of our corporate social and environmental policies and programs, including our compliance with certain voluntary disclosure standards and frameworks, may lead to negative investor sentiment toward us, which could have a negative impact on our stock price and our access to and cost of capital.

Disruptions or breaches of our information technology systems could irreparably damage our reputation and our business, expose us to liability and materially adversely affect our results of operations.

We routinely collect and store sensitive data, including confidential and other proprietary information about our business and our employees, customers, suppliers and business partners. The secure processing, maintenance and transmission of this information is important to our operations and business strategy. We have experienced and expect to continue to experience disruptions, failures or breaches of our information technology environment, such as those caused by computer viruses, illegal hacking, criminal fraud or impersonation, acts of vandalism or terrorism or employee error. Our cybersecurity measures and/or those of our third-party service providers and/or customers

may not detect or prevent such security breaches. We continue to devote resources to reduce the risk of or alleviate cybersecurity breaches and vulnerabilities and those costs could be significant. Although we maintain a cybersecurity program to manage cybersecurity risks, our efforts may not be successful and could result in interruptions and delays that may materially impede our sales, manufacturing operations, distribution or other critical functions. Any compromise of our information security could result in the misappropriation or unauthorized publication of our confidential business or proprietary information or that of other parties with which we do business, an interruption in our operations, the unauthorized transfer of cash or other of our assets, the unauthorized release of customer or employee data or a violation of privacy or other laws. In addition, computer programmers and hackers also may be able to develop and deploy viruses, worms and other malicious software programs that attack our products, or that otherwise exploit any security vulnerabilities, and any such attack, if successful, could expose us to liability to customer claims. Further, AI capabilities may be used to identify vulnerabilities and craft increasingly sophisticated cybersecurity attacks. Any of the foregoing could irreparably damage our reputation and business, which could have a material adverse effect on our results of operations. We maintain cyber risk insurance, although an insufficiency of insurance coverage could adversely affect our cash flows and overall profitability. Furthermore, our efforts to comply with evolving laws and regulations related to cybersecurity may be costly and any failure to comply could result in investigations, proceedings, investor lawsuits and reputational damage.

Risks Related to Our Research and Development and Intellectual Property Activities

We may not be able to keep pace with the rapid change in the technology needed to meet customer requirements.

Success in the semiconductor equipment industry depends, in part, on continual improvement of existing technologies and rapid innovation of new solutions. For example, the semiconductor industry continues to shrink the size of semiconductor devices. This trend and other evolving customer needs require us to continually respond with new product developments. Technical innovations are inherently complex and require long development cycles and appropriate professional staffing. Our future success depends on our ability to develop and introduce new products, or new uses for existing products, that successfully address changing customer needs and gain market acceptance. We also must manufacture these new products in a timely and cost-effective manner. To realize future growth through technical innovations in the semiconductor industry, we must acquire the technology through product development, merger and acquisition activity or through the licensing of products from our technology partners. Potential disruptive technologies could have a material adverse effect on our business if we do not successfully develop and introduce new products, technologies or uses for existing products in a timely manner and continually find ways of reducing the cost to produce them in response to changing market conditions or customer requirements.

Third parties may violate our proprietary rights, in which we have made significant investments, resulting in a loss of value of some of our intellectual property or costly litigation.

Our success is dependent in part on our technology and other proprietary rights. We own various U.S. and international patents and have additional pending patent applications relating to some of our products and technologies. Protecting and defending our patents domestically, and especially internationally, is costly. In addition, the process of seeking patent protection is lengthy and expensive. Therefore, we cannot be certain that pending or future applications will result in issued patents, or that issued patents will be of sufficient scope or strength to provide meaningful protection or commercial advantage to us. Other companies and individuals, including our larger competitors, may develop technologies that are similar or superior to our technology or design around the patents we own or license. In addition, the patent for the technology that we license and use in our manufacture of insert carriers has expired, which, along with the other risks related to our patents described above, may have the effect of diminishing or eliminating any competitive advantage we may have with respect to our manufacturing process.

We also maintain trademarks on certain of our products and claim copyright protection for certain proprietary software and documentation. We can give no assurance, however, that our trademarks and copyrights will be upheld or will successfully deter infringement by third parties.

We attempt to protect our trade secrets and other proprietary information through confidentiality agreements with our customers, suppliers, employees and consultants and through other security measures. We also maintain exclusive and non-exclusive licenses with third parties for the technology used in certain products. However, these

employees, consultants and third parties may breach these agreements, and we may not have adequate remedies for wrongdoing. In addition, the laws of certain territories, such as China, in which we develop, manufacture or sell our products may not protect our intellectual property rights to the same extent as do the laws of the United States.

We may face intellectual property infringement claims that could be time-consuming and costly to defend and could result in our loss of significant rights and the assessment of treble damages.

From time to time, we have received communications from other parties asserting the existence of patent rights or other intellectual property rights that they believe cover certain of our products, processes, technologies or information. Some of these claims may lead to litigation. We cannot assure that we will prevail in these actions, or that other actions alleging misappropriation or misuse by us of third-party trade secrets, infringement by us of third-party patents and trademarks or the validity of our patents, will not be asserted or prosecuted against us. If there is a successful claim of infringement against us, we may be required to pay substantial damages (including treble damages if we were to be found to have willfully infringed a third party's patent) to the party claiming infringement, incur costs to develop non-infringing technology, stop selling or using technology that contains the allegedly infringing intellectual property, or enter into royalty or license agreements that may not be available on acceptable or commercially practical terms, if at all. Intellectual property litigation, regardless of outcome, is expensive and time-consuming, and could divert management's attention from our business. Our failure to successfully defend against infringement claims, or to develop non-infringing technologies or license the proprietary rights on a timely basis, could have a material negative effect on our business, operating results or financial condition.

Risks Related to Our Common Stock

Our stock price may be volatile.

Historically, our common stock has experienced substantial price volatility, particularly as a result of fluctuations in our revenue, earnings and margins over the past few years, and variations between our actual financial results and the published expectations of analysts. For example, during the two-year period ended September 30, 2025, the price of our common stock has ranged from \$10.25 to \$3.20. If our future operating results or margins are below the expectations of stock market analysts or our investors, our stock price will likely decline.

Speculation and opinions in the press or investment community about our strategic position, financial condition, results of operations or significant transactions can also cause changes in our stock price. Competition in some of the markets we address such as the SiC industry, and the effect of tariffs or COVID-19 or other pandemics on our business, may have a dramatic effect on our stock price.

Additional factors may affect our stock price, including sales of our common stock by us or our existing shareholders as well as changes to the coverage and/or rating of our stock by securities analysts.

Our officers, directors and largest shareholders could choose to act in their best interests and not necessarily those of our other shareholders.

Our directors, executive officers and holders of ten percent or more of our outstanding common stock and their affiliates represent a significant portion of our common stock held as of September 30, 2025, and, therefore, could have significant influence over our management and corporate policies. These shareholders have significant influence over all matters submitted to our shareholders, including the election of our directors and approval of business combinations, and could potentially initiate or delay, deter or prevent a change of control. Circumstances may occur in which the interests of these shareholders may conflict with the interests of Amtech or those of our other shareholders, and these shareholders may cause us to take actions that align with their interests. Should conflicts of interest arise, we can provide no assurance that these shareholders would act in the best interests of our other shareholders or that any conflicts of interest would be resolved in a manner favorable to our other shareholders. In addition, involvement of certain activist shareholders may impact our ability to recruit and retain talent or otherwise distract management or make decisions that we believe are in the long-term interest of all shareholders.

Shareholder activists could cause a disruption to our business.

An activist investor may indicate disagreement with our strategic direction or capital allocation policies and may seek representation on our Board of Directors. Our business, operating results or financial condition could be adversely affected and may result in, among other things: (a) increased operating costs, including increased legal expenses, insurance, administrative expenses and associated costs incurred in connection with director election contests; (b) uncertainties as to our future direction, which could result in the loss of potential business opportunities and could make it more difficult to attract, retain, or motivate qualified personnel, and strain relationships with investors and customers; and (c) reduction or delay in our ability to effectively execute our current business strategy and to implement new strategies.

There are provisions in our corporate governing documents that could make an acquisition of the Company more difficult and limit attempts by our shareholders to replace or remove our current management.

Our amended and restated articles of incorporation and our amended and restated bylaws, as well as Arizona law, contain provisions that may have the effect of deterring takeovers or delaying or preventing a change in control of us or changes in our management that a shareholder might deem to be in his or her best interest. Our amended and restated articles of incorporation and amended and restated bylaws contain provisions that: (a) authorize “blank check” preferred stock, which could be issued by our Board of Directors without shareholder approval and may contain voting, liquidation, dividend and other rights superior to our common stock; (b) specify that special meetings of our shareholders can be called only by our Board of Directors, the Chairperson of our Board of Directors, our Chief Executive Officer, or a majority of the Board of Directors; (c) provide that vacancies on our Board of Directors may be filled only by a majority of directors then in office, though not less than a quorum; (d) specify that only our Board of Directors may change the size of our Board of Directors; (e) establish an advance notice procedure for shareholder proposals to be brought before an annual meeting of our shareholders, including proposed nominations of persons for election to our Board of Directors; and (f) expressly authorize our Board of Directors to modify, alter or repeal our bylaws. These provisions, alone or together, could delay or prevent hostile takeovers and changes in control or changes in our management or our Board of Directors.

In addition, because we are incorporated in the State of Arizona, we are governed by the provisions of the Arizona Revised Statutes Section 10-274, which prohibits certain business combinations between us and certain interested shareholders unless specified conditions are met. These provisions may also have the effect of delaying or preventing a change in control of Amtech. Any provision of our amended and restated articles of incorporation or amended and restated bylaws or Arizona law that has the effect of delaying or deterring a change in control could limit the opportunity for our shareholders to receive a premium for their shares of our common stock and could also affect the price that some investors are willing to pay for our common stock.

ITEM 1B. UNRESOLVED STAFF COMMENTS

None.

ITEM 1C. CYBERSECURITY

Our Board recognizes the importance of maintaining the trust and confidence of our customers, suppliers, business partners and employees. Our Board, through the Audit Committee, oversees our cybersecurity program as part of our enterprise-wide approach to risk management. Our cybersecurity policies, standards, processes and practices are fully integrated into our risk management approach and are based on recognized frameworks established by the National Institute of Standards and Technology, the International Organization for Standardization and other applicable industry standards. In general, we seek to address cybersecurity risks through a comprehensive, cross-functional approach that is focused on preserving the confidentiality, security and availability of the information that we collect and store by identifying, preventing and mitigating cybersecurity threats and effectively responding to cybersecurity incidents when they occur.

Risk Management and Strategy

As one of the critical elements of enterprise-wide approach to risk management, our cybersecurity program is focused on the following key areas:

Governance: As discussed in more detail under the heading “Governance” below, our cybersecurity program is led by our IT Director, who reports to our Chief Financial Officer and is responsible for publishing cybersecurity policies and standards, conducting annual risk assessments and maintaining our compliance. Our IT Director leads our information technology team and regularly reports to our Audit Committee.

Collaboration: We have implemented a comprehensive, cross-functional approach to identifying, preventing and mitigating cybersecurity threats and incidents, while also implementing controls and procedures that provide for the prompt escalation of certain cybersecurity incidents so that decisions regarding the public disclosure and reporting of such incidents can be made by management in a timely manner. We work with third-party firms to monitor our cybersecurity environment and report findings to executive leadership, internal audit and the Audit Committee regularly.

Technical Safeguards: We deploy technical safeguards that are designed to protect our information systems from cybersecurity threats, including firewalls, intrusion prevention and detection systems, anti-malware functionality and access controls, which are evaluated and improved through vulnerability assessments, certifications, audits and cybersecurity threat intelligence.

Incident Response and Recovery Planning: We have established and maintained comprehensive incident response and recovery plans that fully address our response to a cybersecurity incident, and such plans are tested and evaluated on a regular basis.

Third-Party Risk Management: We maintain a comprehensive, risk-based approach to identifying and overseeing cybersecurity risks presented by third parties, including vendors, service providers and other external users of our systems, as well as the systems of third parties that could adversely impact our business in the event of a cybersecurity incident affecting those third-party systems. Additionally, we have in place insurance coverage designed to provide coverage in connection with cybersecurity breaches, provided, however, that such insurance coverage may be insufficient to cover all insured losses or all types of claims that may arise.

Education and Awareness: We provide regular, mandatory training for personnel regarding cybersecurity threats as a means to equip our personnel with effective tools to address cybersecurity threats, and to communicate our evolving information security policies, standards, processes and practices.

We engage in the periodic assessment and testing of our policies, standards, processes and practices that are designed to address cybersecurity threats and incidents. These efforts include a wide range of activities, including audits, assessments, vulnerability testing and other exercises focused on evaluating the effectiveness of our cybersecurity measures and planning. We regularly engage third parties to perform assessments on our cybersecurity measures, including information security maturity assessments, audits and independent reviews of our information security control environment and operating effectiveness. The results of such assessments, audits and reviews are reported to our Board and Audit Committee by our IT Director based on materiality. We adjust our cybersecurity policies, standards, processes and practices as necessary based on the information provided by these assessments, audits and reviews.

Governance

Our Board, through the Audit Committee, oversees our enterprise-wide approach to risk management, including the risks arising from cybersecurity threats. Our Audit Committee regularly receives presentations and reports on cybersecurity risks, which address a wide range of topics, including recent developments, evolving standards, vulnerability assessments, third-party and independent reviews, the threat environment, technological trends and information security considerations arising with respect to our peers and third parties. Our Audit Committee also receives prompt and timely information regarding any cybersecurity incident that meets established reporting thresholds, as well as ongoing updates regarding any such incident until it has been addressed. On an annual basis, our Audit Committee discusses our Company’s approach to cybersecurity risk management with management.

Our Audit Committee, in connection with management led by our Chief Financial Officer, works collaboratively across our Company to implement a program designed to protect our information systems from cybersecurity threats

and to promptly respond to any cybersecurity incidents in accordance with our incident response and recovery plans. To facilitate the success of our cybersecurity risk management program, multidisciplinary teams are deployed to address cybersecurity threats and respond to cybersecurity incidents. Through ongoing communications with these teams, our Audit Committee monitors the prevention, detection, mitigation, and remediation of cybersecurity threats and incidents in real-time and report such threats and incidents to management when appropriate.

Our IT Director has served in various roles in technology leadership for more than 20 years, including cybersecurity. With an undergraduate degree in Information Systems, an MBA, and certification as a Certified Information Systems Security Professional (CISSP) from ISC2, the IT Director plays a key role in managing risks at our company. This includes risks arising from cybersecurity threats, drawing on extensive experience gained from similar companies and leadership positions across the technology sector. Although the Company does not have both a Chief Technology Officer or a Vice President of Security, the IT Director's expertise ensures robust risk management practices are in place. Our Chief Executive Officer, Chief Financial Officer and IT Director each hold undergraduate and/or graduate degrees in their respective fields, and each has experience managing risks at our Company and at similar companies including risks arising from cybersecurity threats.

Cybersecurity Threats

As of the date of this Annual Report on Form 10-K, we do not believe that any risks from cybersecurity threats, including as a result of previous cybersecurity incidents, are reasonably likely to have a material effect on us, our business strategy, results of operations, cash flows or financial condition.

ITEM 2. PROPERTIES

We believe that our properties are adequate for our current needs. In addition, we believe that adequate space can be obtained to meet our foreseeable business needs. The following chart identifies the principal properties which we own or lease.

Location	Use	Own or Lease	Size
Corporate			
Tempe, Arizona	Corporate Headquarters	Lease	6,388 sf
Thermal Processing Solutions Segment			
Ashvale, Surrey, United Kingdom	Office	Lease	1,900 sf
Shanghai, China	Office, Mfg. & Warehouse	Lease	76,530 sf
Penang, Malaysia	Office	Lease	1,570 sf
Westford, Massachusetts	Office, Mfg. & Warehouse	Lease	57,025 sf
Semiconductor Fabrication Solutions Segment			
Phoenix, Arizona	Office & Mfg.	Lease	37,000 sf
Bethel, Connecticut	Office & Mfg.	Lease	18,830 sf
Carlisle, Pennsylvania	Office & Mfg.	Lease	40,500 sf
Spartanburg, South Carolina	Manufacturing	Lease	23,100 sf

ITEM 3. LEGAL PROCEEDINGS

Amtech and its subsidiaries are defendants from time to time in actions for matters arising out of their business operations. We do not believe that any matters or proceedings presently pending will have a material adverse effect on our consolidated financial position, results of operations or liquidity.

ITEM 4. MINE SAFETY DISCLOSURES

Not applicable.

PART II

ITEM 5. MARKET FOR REGISTRANT'S COMMON EQUITY, RELATED STOCKHOLDER MATTERS AND ISSUER PURCHASES OF EQUITY SECURITIES

MARKET INFORMATION

Our common stock, par value \$0.01 per share (Common Stock), is trading on the NASDAQ Global Select Market, under the symbol "ASYS." The stock price details can be obtained from the Nasdaq website at www.nasdaq.com.

ISSUER PURCHASES OF EQUITY SECURITIES

Share Repurchase Programs

During the year ended September 30, 2025, we did not repurchase any of our equity securities nor did we sell any equity securities that were not registered under the Securities Act of 1933, as amended. As of September 30, 2025, there are no amounts authorized for repurchase.

HOLDERS

As of December 3, 2025, there were 263 shareholders of record of our Common Stock. Based upon a recent survey of brokers, we estimate there were approximately an additional 1,077 beneficial shareholders who held shares in brokerage or other investment accounts as of that date.

DIVIDENDS

We have never paid dividends on our Common Stock. Our present policy is to apply cash to investments in product development and upgrades, acquisitions or expansion, and debt repayments; consequently, we do not expect to pay dividends on our Common Stock in the foreseeable future. However, once the above priorities have been met, we will evaluate the returning of capital to shareholders, as we have done in the past.

UNREGISTERED SALES OF EQUITY SECURITIES

There were no unregistered sales of equity securities in fiscal 2025.

ITEM 6. RESERVED

ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

The following discussion of our financial condition and results of operations should be read together with our Consolidated Financial Statements and the accompanying notes included in "Item 8. Financial Statements and Supplementary Data" in this Annual Report on Form 10-K. This discussion contains forward-looking statements, which involve risks and uncertainties. Our actual results could differ materially from those anticipated in the forward-looking statements as a result of certain factors including, but not limited to, those described in "Risk Factors" and elsewhere in this Annual Report on Form 10-K. Please refer to page 5 for further information regarding forward-looking statements and "Item 1.A. Risk Factors" for a description of our risk factors.

Overview

We provide equipment, consumables and services for semiconductor device packaging, wafer production and device fabrication. Our products are used to fabricate and package semiconductor devices, such as graphic processing units (GPU's) used in AI applications, silicon carbide (SiC) and silicon (Si) power devices and other optical, analog and digital devices. We sell these products to semiconductor device packaging, electronic assembly and device fabrication companies worldwide.

We operate in two reportable segments, based primarily on the industries they serve: (i) Thermal Processing Solutions and (ii) Semiconductor Fabrication Solutions. Our thermal processing solutions include reflow equipment for chip packaging and electronic assembly, diffusion furnaces and furnaces used to produce ceramic based power semiconductor packages and passive electronic components. Our semiconductor fabrication solutions include consumables, equipment and services for wafer polishing, cleaning, slicing and dicing.

The markets we serve are historically cyclical, but not seasonal, with constantly evolving technical requirements and can be subject to tariffs and sourcing restrictions driven by geopolitical tensions. Our revenue is impacted by these broad industry trends.

Growth and Investment Strategy

We believe there are three key secular trends that are key to our future growth:

- **Artificial Intelligence** - With Artificial Intelligence (AI), we believe our reflow oven systems have leading market share with Outsourced Semiconductor Assembly and Test Services (OSATS) providers who perform advanced packaging of the AI chips.
- **Supply Chain Resiliency** - There is a global trend of creating supply chain resiliency by expanding and/or relocating operations outside of mainland China. We believe these factories will create demand for new equipment and services in growing regions like Southeast Asia and Mexico.
- **Advanced Mobility** - Advanced Mobility encompasses both the development and adoption of electric vehicles and charging infrastructure, including both electric vehicle (EV) and hybrid electric vehicles (HEV), as well as advanced automotive electronics including Advanced Driver Assistance Systems (ADAS), infotainment and telematics. Our products intersect these markets in multiple ways: CMP consumables and wafer cleaning systems for the SiC substrates used in the EV power inverters; thermal processing systems for producing EV battery cooling systems and ceramic substrates for HEV power semiconductor packaging; and reflow ovens for ADAS, infotainment and telematics component assemblies.

Customer-centric product development in R&D: We continue to invest in research and development to expand our Thermal Processing Solutions reflow equipment product-line for AI applications. Our goal is to expand our addressable market by enabling mass production of higher density packages. We are also investing in application development and R&D resources to accelerate growth of our Semiconductor Fabrications Solutions business by expanding our consumables product portfolio and providing exceptional technical support and service to customers.

Semi-Fabless Manufacturing Model: We have migrated to a semi-fabless manufacturing model for the majority of our capital equipment business to improve our ability to scale production and reduce fixed costs. Our manufacturing partners provide a cost-effective alternative to in-house production and help mitigate the financial impact of variable demand that is inherent to the capital equipment business.

In June 2022, we completed the sale of the real property where our manufacturing facility in Massachusetts is located and entered into a two-year leaseback of the facility. This sale-leaseback transaction resulted in a net cash inflow of approximately \$14.9 million, after repayment of the existing mortgage and settlement of related sale expenses. In September 2023, we signed a lease for a new location with less square footage and completed the move to this new location in June 2024. As we expand our use of contract manufacturers, we will continue to look for ways to reduce our real estate footprint. In March 2024, we completed the sale of our corporate headquarters real property in Arizona. The sale resulted in a net cash inflow of approximately \$2.5 million, after settlement of related sale expenses. Following the closing of this transaction, we entered into a lease agreement for a new office for our corporate headquarters, which commenced during the third quarter of fiscal year 2024. In addition, we are evaluating business continuity and resiliency within our operations, our management information systems, and our needs to allow for greater efficiencies and to ensure our infrastructure can support our future growth plans. As a capital equipment manufacturer, we will continue to invest in our business to drive future growth.

Segment Reporting Changes

We evaluated our organizational structure and concluded that we have two reportable segments; Thermal Processing Solutions and Semiconductor Fabrication Solutions.

Industry Fluctuations

Our quarterly and annual operating results have been and will continue to be impacted by the timing of large system orders. Further, the semiconductor equipment industry is highly cyclical, and the conditions of this industry remain volatile. Therefore, our order flow fluctuates quarter to quarter. For additional information regarding the risks related to our business and industry, please refer to “Item 1A. Risk Factors” within this Form 10-K.

Fiscal Year

Our fiscal year is from October 1 to September 30. Unless otherwise stated, references to the years 2025 and 2024 relate to the fiscal years ended September 30, 2025 and 2024, respectively.

Results of Operations

The following table sets forth certain financial data as a percentage of net revenue for the periods indicated:

	Years Ended September 30,	
	2025	2024
Net revenue	100%	100%
Cost of sales	66%	63%
Intangible asset impairment	—%	1%
Gross margin	34%	36%
Selling, general and administrative	36%	33%
Research, development and engineering	4%	4%
Gain on sale of fixed assets	—%	(2)%
Goodwill impairment	26%	6%
Intangible asset impairment	3%	1%
Severance	1%	1%
Operating loss	(36)%	(7)%
Interest income	1%	—%
Interest expense	—%	—%
Foreign currency gain (loss)	—%	—%
Other	—%	—%
Loss before income taxes	(35)%	(7)%
Income tax provision	3%	1%
Net loss	(38)%	(8)%

Fiscal 2025 compared to Fiscal 2024

Net Revenue

Net revenue consists of revenue recognized upon shipment or delivery of equipment. Spare parts sales are recognized upon shipment and service revenue is recognized upon completion of the service activity, which is generally ratable over the term of the service contract. Since the majority of our revenue is generated from large system sales, revenue, gross profit and operating income can be significantly impacted by the timing of system shipments.

Our net revenue by reportable segment was as follows, dollars in thousands:

Segment	Years Ended September 30,		Increase (Decrease)	% Change
	2025	2024		
Thermal Processing Solutions	\$ 58,057	\$ 69,161	\$ (11,104)	(16)%
Semiconductor Fabrication Solutions	21,307	32,053	(10,746)	(34)%
Total net revenue	<u>\$ 79,364</u>	<u>\$ 101,214</u>	<u>\$ (21,850)</u>	<u>(22)%</u>

Net revenue for the years ended September 30, 2025 and 2024 were \$79.4 million and \$101.2 million, respectively, a decrease of \$21.9 million or 22%. Revenue from the Thermal Processing Solutions segment decreased \$11.1 million, or 16%, over the prior year period. Our Thermal Processing Solution results for 2025 reflect decreases in belt furnace shipments and horizontal diffusion furnaces shipments, partially offset by increases in shipments of our parts and service business. We are also seeing year-over-year growth in our advanced packaging SPG reflow oven business due to AI chip demand. Revenue from our Semiconductor Fabrication Solutions segment decreased \$10.7 million, or 34%, due to decreases in shipments of our polishing equipment. Additionally, we experienced declines in our wafer cleaning equipment, partially offset by increases in shipments of our consumables. Our chemical consumable business, which produces solutions for the semiconductor and medical industries experienced year-over-year growth.

Orders and Backlog

New orders booked by reportable segment were as follows, dollars in thousands:

Segment	Years Ended September 30,		Increase (Decrease)	% Change
	2025	2024		
Thermal Processing Solutions	\$ 51,867	\$ 49,318	\$ 2,549	5%
Semiconductor Fabrication Solutions	22,074	29,959	(7,885)	(26)%
Total new orders	<u>\$ 73,941</u>	<u>\$ 79,277</u>	<u>\$ (5,336)</u>	<u>(7)%</u>

Our backlog by reportable segment was as follows, dollars in thousands:

Segment	September 30,		Increase (Decrease)	% Change
	2025	2024		
Thermal Processing Solutions	\$ 14,655	\$ 20,845	\$ (6,190)	(30)%
Semiconductor Fabrication Solutions	5,234	4,467	767	17%
Total backlog	<u>\$ 19,889</u>	<u>\$ 25,312</u>	<u>\$ (5,423)</u>	<u>(21)%</u>

At the end of 2025, two customers individually accounted for 29% and 11% of our total backlog. No other customer accounted for more than 10% of our backlog as of September 30, 2025. The orders included in our backlog are generally credit approved customer purchase orders believed to be firm and are generally expected to ship within the next twelve months. Our backlog at any particular point in time is not necessarily representative of actual sales for succeeding periods, nor is backlog any assurance that we will realize profit from completing these orders. During 2025, the improvement in lead times across all of our product lines favorably contributed to the decline in our backlog.

Gross Profit and Gross Margin

Gross profit is the difference between net revenue and cost of goods sold and intangible asset impairment. Cost of goods sold consists of purchased material, labor and overhead to manufacture equipment and spare parts and the cost of service and support to customers for installation, warranty and paid service calls. Gross margin is gross profit

as a percent of net revenue. Our gross profit and gross margin by reportable segment were as follows, dollars in thousands:

Segment	Years Ended September 30,					
	2025	Gross Margin	2024	Gross Margin	Increase (Decrease)	% Change
Thermal Processing Solutions	\$ 20,566	35%	\$ 24,269	35%	\$ (3,703)	(15)%
Semiconductor Fabrication Solutions	6,417	30%	11,962	37%	(5,545)	(46)%
Total gross profit	<u>\$ 26,983</u>	34%	<u>\$ 36,231</u>	36%	<u>\$ (9,248)</u>	(26)%

Gross profit for the years ended September 30, 2025 and 2024 was \$27.0 million and \$36.2 million, respectively, representing a decrease of \$9.2 million, or 26%. Gross margin for 2025 and 2024 was 34% and 36%, respectively. Gross margin for the Thermal Processing Solutions segment stayed consistent at 35% in 2025 and 2024, due primarily to inventory obsolescence expense and unfavorable product mix with decreases in shipments of our lower margin profile high-temperature furnaces and BDF equipment partially offset by the employee retention credit (ERC) which reduced expenses. In addition, we had an increase in shipments of our higher margin profile advanced packaging SPG equipment. Gross margin for the Semiconductor Fabrication Solutions segment, decreased to 30% in 2025, compared to 37% in 2024 due primarily to inventory obsolescence expense caused by a decline in the mature node semiconductor market slightly offset by the ERC which reduced expenses. We experienced moderate material costs increases across all our segments. In response to such increased costs, we reviewed our pricing plans and supplier agreements, with the objective of passing along these increased costs to our customers where possible; however, we continue to experience pricing pressure from our customers. We are also continuing to explore additional partnerships with contract manufacturers, who can leverage their buying power on a larger scale. Throughout fiscal 2025, we made targeted labor reductions as a result of the shift to contract manufacturing and the continuing slowdown in the broader semiconductor industry.

Selling, General and Administrative Expenses

Selling, general and administrative (“SG&A”) expenses consist primarily of the cost of employees, consultants and contractors, facility costs, sales commissions, shipping costs, promotional marketing expenses, legal and accounting expenses and bad debt expense.

Our net SG&A expense by reportable segment was as follows, dollars in thousands:

Segment	Years Ended September 30,		Increase (Decrease)	% Change
	2025	2024		
Thermal Processing Solutions	\$ 12,429	\$ 15,110	\$ (2,681)	(18)%
Semiconductor Fabrication Solutions	7,959	8,498	(539)	(6)%
Non-segment related	8,563	10,206	(1,643)	(16)%
Total selling, general and administrative expense	<u>\$ 28,951</u>	<u>\$ 33,814</u>	<u>\$ (4,863)</u>	(14)%

Total SG&A expenses for the years ended September 30, 2025 and 2024 were \$29.0 million and \$33.8 million, respectively, representing a decrease of \$4.9 million or 14%. This decrease was primarily due to planned cost reduction efforts around overhead expenses and staff reductions during 2025, resulting in lower insurance expenses, professional fees, salaries and employee-related expenses, such as travel, commissions and bonuses. In addition, the ERC reduced expenses contributing to the lower SG&A. Non-segment related SG&A expense includes \$1.2 million and \$1.5 million of non-cash stock-based compensation expense for 2025 and 2024, respectively.

Research, Development and Engineering

Research, development and engineering (“RD&E”) expenses consist of the cost of employees, consultants and contractors who design, engineer and develop new products and processes as well as materials and supplies used in producing prototypes. RD&E expenses may vary from period to period depending on the engineering projects in process. Expenses related to engineers working on strategic projects or sustaining engineering projects are recorded

in RD&E. However, from time to time, we add functionality to our products or develop new products during engineering and manufacturing to fulfill specifications in a customer's order, in which case the cost of development, along with other costs of the order, are charged to cost of goods sold.

Our net research and development expense by reportable segment was as follows, dollars in thousands:

Segment	Years Ended September 30,		Increase (Decrease)	% Change
	2025	2024		
Thermal Processing Solutions	\$ 2,133	\$ 2,840	\$ (707)	(25)%
Semiconductor Fabrication Solutions	516	1,353	(837)	(62)%
Total research, development and engineering expense	<u>\$ 2,649</u>	<u>\$ 4,193</u>	<u>\$ (1,544)</u>	<u>(37)%</u>

RD&E expenses for the years ended September 30, 2025 and 2024 were \$2.6 million and \$4.2 million, respectively, a decrease of \$1.5 million. The decrease in RD&E expense is due to the timing of purchases related to specific strategic-development projects at our Thermal Processing Solutions and Semiconductor Fabrication Solutions segments. In addition we had lower overhead expenses due to cost saving initiatives and the ERC which reduced expenses.

Gain on Sale of Fixed Assets

Gain on sale of fixed assets consists of the gain on the sale of our corporate headquarters in Arizona in March 2024. This sale resulted in a net gain of approximately \$2.2 million, after settlement of related sale expenses and disposal of assets.

Intangible Asset Impairment

In the second quarter of fiscal year 2025, we recognized impairment of our definite lived intangible assets of \$2.6 million at our Semiconductor Fabrication Solutions segment. As disclosed above, this impairment was recorded within operating expenses in the Condensed Consolidated Statement of Operations. See Note 8 for a description of the facts and circumstances leading to the intangible asset impairments.

In the first quarter of fiscal year 2024, we recognized impairment of our definite lived intangible assets of \$1.3 million at our Semiconductor Fabrication Solutions segment. Of the \$1.3 million, \$0.8 million of this impairment was recorded in cost of goods sold, and the remainder was recorded within operating expenses in our Consolidated Statement of Operations. See Note 8 for a description of the facts and circumstances leading to the intangible asset impairment events.

Goodwill Impairment

In the second quarter of fiscal year 2025, we recognized impairment of our goodwill of \$15.4 million at our Semiconductor Fabrication Solutions segment and \$5.0 million at our Thermal Processing Solutions segment. See Note 9 for a description of the facts and circumstances leading to the goodwill impairment.

In the first quarter of fiscal year 2024, we recognized impairment of our goodwill of \$6.4 million at our Semiconductor Fabrication Solutions segment as a result of a triggering event identified at the end of the first quarter. See Note 9 for a description of the facts and circumstances leading to the goodwill impairment.

Severance Expense

Severance expense was \$0.7 million and \$0.4 million in 2025 and 2024, respectively. This related primarily to staff

reductions across our locations as we shifted more work to contract manufacturers and dealt with decreasing demand.

Income Taxes

Our effective tax rate was (8.3)% and (13.0)% in 2025 and 2024, respectively. The effective tax rate is the ratio of total income tax expense to pre-tax income. The effective tax rates for 2025 and 2024 were lower than the U.S. statutory rate of 21%. The 2025 effective tax rate was negatively impacted by non-deductible expenses, including goodwill impairment, foreign income taxed at different rates, foreign withholding tax and losses for which no tax benefit can be recognized.

In 2025 and 2024, we recorded income tax expense of \$2.3 million and \$1.0 million, respectively. The income tax provisions are based upon estimates of annual income, annual permanent differences, statutory tax rates and credits in the various jurisdictions in which we operate. Significant judgments and estimates are required in the determination of the consolidated income tax expense.

Generally accepted accounting principles of the United States (“GAAP”) require that a valuation allowance be established when it is “more likely than not” that all or a portion of deferred tax assets will not be realized. A review of all available positive and negative evidence needs to be considered, including a company’s performance, the market environment in which the company operates and the length of carryback and carryforward periods. According to those principles, it is difficult to conclude that a valuation allowance is not needed when the objective negative evidence includes cumulative losses in recent years. Such objective negative evidence limits the ability to consider other subjective evidence, such as future projections. Based on the consideration of all available evidence, we have concluded that we will maintain a full valuation allowance for the net deferred tax assets in the U.S. We will continue to monitor our cumulative income and loss positions in the U.S. and foreign jurisdictions to determine whether full valuation allowances on U.S. net deferred tax assets are appropriate.

The calculation of our tax liabilities involves dealing with uncertainties in the application of complex tax laws and regulations in a multitude of jurisdictions across our global operations. ASC 740, “Income Taxes”, states that a tax benefit from an uncertain tax position may be recognized when it is more likely than not that the position will be sustained upon examination, including resolutions of any related appeals or litigation processes, on the basis of the technical merits. As of September 30, 2025, we have no unrecognized tax benefits recorded within our financial statements. We record unrecognized tax benefits as liabilities in accordance with ASC 740 and adjust these liabilities when our judgment changes as a result of the evaluation of new information not previously available.

We expect to pay minimal U.S. federal cash taxes for the foreseeable future as a result of our U.S. net operating losses and tax credits that are carried forward.

Our future effective income tax rate depends on various factors, such as the amount of income (loss) in each tax jurisdiction, tax regulations governing each region, non-deductible expenses incurred as a percent of pre-tax income and the effectiveness of our tax planning strategies.

On July 4th, 2025, the President signed into law significant federal tax legislation, H.R.1 (commonly known as the One Big Beautiful Bill Act or OBBBA). The legislation includes numerous changes to U.S. corporate income tax law, including but not limited to: permanent 100% bonus depreciation for qualified property, immediate expensing of domestic research and experimental expenditures, modifications to the limitation on business interest expense, changes to the international tax regime, and expanded limitations on the deductibility of executive compensation under IRC Section 162(m). Most provisions are effective for tax years beginning after December 31, 2024, with certain transition rules and exceptions.

OBBBA is not expected to have a material impact on our consolidated financial statements due to the full valuation allowance in the US. We continue to monitor additional guidance issued relating to OBBBA and assess the impact to our financial statements.

Selected Quarterly Data (Unaudited)

The following table sets forth selected unaudited consolidated quarterly financial information, in thousands, except percentages and per share amounts:

	Fiscal Year 2025			
	First Quarter	Second Quarter	Third Quarter	Fourth Quarter
Revenue, net	\$ 24,385	\$ 15,580	\$ 19,557	\$ 19,842
Cost of sales	15,022	15,905	10,425	11,029
Intangible asset impairment	—	—	—	—
Gross profit (loss)	9,363	(325)	9,132	8,813

Liquidity and Capital Resources

Liquidity

We maintain a strong focus on liquidity and define our liquidity risk tolerance based on sources and uses to maintain a sufficient liquidity position to meet our obligations through our industry cycles, under both normal and stressed conditions. We manage our liquidity to provide access to sufficient funding to meet our business needs and financial obligations throughout business cycles. We operate in the semiconductor capital equipment industry, which is cyclical, and we must ensure we have sufficient liquidity during the down cycles and varying macroeconomic conditions. Our liquidity plans are established within the context of our financial and strategic planning processes and consider the liquidity necessary to fund our operating commitments, which include purchase obligations for inventory and equipment, rent, payroll and general expenses. We also take into consideration our capital allocation and growth objectives, including investing in research and development and capital expenditures (including capacity assessments and IT systems).

The success of our investment and growth strategy is dependent upon the availability of additional capital resources on terms satisfactory to management. Our sources of capital in the past have included a credit facility with a regional bank, the sale of equity securities, which includes common stock sold in private transactions and public offerings, and cash generated from operations. There can be no assurance that we can raise such additional capital resources when needed or on satisfactory terms. We believe that our principal sources of liquidity discussed above are sufficient to support operations for at least the next twelve months.

Capital Allocation

Our capital allocation strategy focuses on building shareholder value. We do this by first investing in ourselves and growing our capabilities. We then look to supplement and strengthen our capabilities through acquisitions and strategic investments. And finally, we provide the return realized by our investments to our stockholders. These three priorities are detailed as follows:

- Invest in R&D and capital expenditures to strengthen our competitive position. Historically, our R&D efforts have focused on upgrades to existing product platforms as well as new product designs. Capital expenditures consist primarily of capacity expansion as well as investments in IT systems.
- Invest in strategic acquisitions that will complement our strong platform of product offerings. In evaluating these opportunities, our objectives include enhancing our earnings and cash flows, adding complementary product offerings, expanding our geographic footprint, improving our production efficiency and expanding our customer base. As a result, we continue to manage our balance sheet to maintain adequate liquidity so that we may react quickly as opportunities arise.
- Once the above priorities have been met, we evaluate the return of capital to shareholders, as we have done in the past. We have never paid dividends on our common stock, and we do not expect to pay dividends on common stock in the foreseeable future. However, our Board from time to time has authorized annual stock repurchase plans.

Cash and Cash Flow

The following table sets forth for the periods presented certain consolidated cash flow information, in thousands:

	Years Ended September 30,	
	2025	2024
Net cash provided by operating activities	\$ 7,877	\$ 9,842
Net cash used in investing activities	\$ (912)	\$ (2,178)
Net cash provided by (used in) financing activities	\$ 270	\$ (10,633)
Effect of exchange rate changes on cash	\$ (417)	\$ 922
Net increase (decrease) in cash and cash equivalents	\$ 6,818	\$ (2,047)
Cash and cash equivalents, beginning of year	\$ 11,086	\$ 13,133
Cash and cash equivalents, end of year	\$ 17,904	\$ 11,086

A summary of our cash position, is as follows, in thousands, except working capital ratio:

	September 30,	
	2025	2024
Cash and cash equivalents	\$ 17,904	\$ 11,086
Restricted cash	\$ —	\$ —
Working capital	\$ 39,695	\$ 44,497
Current ratio (current assets to current liabilities)	2.9:1	3.2:1

The increase in cash and cash equivalents from September 30, 2024 of \$6.8 million was primarily due to cash generated in operations slightly offset by investing activities and the effect of exchange rates on cash. We maintain a portion of our cash and cash equivalents in Renminbi, a Chinese currency, at our operations in China. As a result, changes in the exchange rates have an impact on our cash balances.

During periods of weakening demand, we typically generate cash from operating activities, which we may decide to reinvest in our business via strategic projects. Conversely, we are more likely to use operating cash flows for working capital requirements during periods of higher growth. Our sources of capital in the past have included the sale of equity securities, which includes common stock sold in private transactions and public offerings, the incurrence of long-term debt and customer deposits.

Cash Flows from Operating Activities

Cash provided by operating activities was \$7.9 million in 2025 compared to cash provided by operating activities of \$9.8 million in 2024. In 2025, we decreased our accounts receivable, inventory, and contract asset balances as we completed shipments throughout the year, reducing our backlog. These cash inflows were partially offset by decreases in accrued liabilities and contract liabilities as our purchasing activity decreased and the related liabilities were paid. During 2024, we decreased our accounts receivable, inventory, and contract asset balances as we completed shipments throughout the year, also reducing our backlog. These cash inflows were partially offset by decreases in accounts payable and accrued liabilities as our purchasing activity decreased and the related liabilities were paid.

Cash Flows from Investing Activities

Cash used in investing activities was \$0.9 million in 2025, primarily consisting of \$1.0 million in capital expenditures made to improve operations and systems. Cash used in investing activities was \$2.2 million in 2024, primarily consisting of \$4.9 million in capital expenditures, partially offset by \$2.7 million of proceeds from the sale of our real property in Arizona. We expect capital expenditures to decrease slightly in 2026, as we have completed our relocation projects and continue to pursue optimization projects to implement new technology across our divisions to improve our business.

Cash Flows from Financing Activities

In 2025, cash provided by financing activities was \$0.3 million, comprised primarily of \$0.4 million proceeds from the exercise of stock options. In 2024, cash used in financing activities was \$10.6 million, comprised primarily of \$10.7 million payments on long-term debt. Our bank term loan and revolving credit agreement has been paid in full and our remaining debt is a small amount of financing leases.

Off-Balance Sheet Arrangements

As of September 30, 2025, we had no off-balance sheet arrangements as defined in Item 303(a)(4) of Regulation S-K promulgated by the SEC that have or are reasonably likely to have a current or future effect on financial condition, changes in financial condition, revenues or expenses, results of operations, liquidity, capital expenditures or capital resources that are material to investors.

Contractual Obligations

We had the following contractual obligations as of September 30, 2025, in thousands:

Contractual obligations	Total	Less than 1 year	1-3 years	3-5 years	More than 5 years
Debt obligations	\$ 294	\$ 126	\$ 128	\$ 40	\$ —
Lease obligations:					
Buildings	24,948	3,167	6,627	6,591	8,563
Office equipment	—	—	—	—	—
Vehicles	11	8	3	—	—
Total operating lease obligations	24,959	3,175	6,630	6,591	8,563
Purchase obligations	4,039	4,039	—	—	—
Total	<u>\$ 29,292</u>	<u>\$ 7,340</u>	<u>\$ 6,758</u>	<u>\$ 6,631</u>	<u>\$ 8,563</u>

Acquisitions

Our business strategy includes the possible acquisition of or investments in other businesses to expand or complement our operations. The magnitude, timing and nature of any future acquisitions or investments will depend on a number of factors, including the availability of suitable acquisition candidates, the negotiation of acceptable

terms, our financial capabilities and access to capital, and general economic and business conditions. Financing for future transactions would result in the utilization of cash, incurrence of additional debt, issuance of equity securities or some combination of the foregoing.

Critical Accounting Estimates

See “Item 7. Management’s Discussion and Analysis of Financial Condition and Results of Operations” for a discussion of our consolidated financial statements that have been prepared in accordance with accounting principles generally accepted in the United States of America. The preparation of these consolidated financial statements requires us to make estimates and assumptions that affect the reported amount of assets and liabilities at the date of the consolidated financial statements, the disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amounts of revenue and expenses during the reporting period.

On an on-going basis, we evaluate our estimates and judgments, including those related to income taxes, inventory valuation, business combinations, goodwill and long-lived assets. We base our estimates and judgments on historical experience, expectations regarding the future and on various other factors that we believe to be reasonable under the circumstances. The results of these estimates and judgments form the basis for making conclusions about the carrying value of assets and liabilities that are not readily apparent from other sources. Actual results may differ from these estimates under different assumptions or conditions.

A critical accounting estimate is one that is both important to the presentation of our financial position and results of operations, and requires management’s most difficult, subjective or complex judgments, often as a result of the need to make estimates about the effect of matters that are inherently uncertain. These uncertainties are discussed in “Item 1A. Risk Factors.” We believe that the following accounting estimates we have identified as critical involve a greater degree of judgment and complexity than our other accounting policies. Accordingly, these are the estimates we believe are the most critical to understanding and evaluating our consolidated financial condition and results of operations. Refer to Note 1 to our consolidated financial statements included elsewhere in this report for a summary of each of the related accounting policies.

Income Taxes. We file consolidated federal income tax returns in the United States for all subsidiaries except those in China, Singapore, Malaysia and the UK, where separate returns are filed. The calculation of tax liabilities for all jurisdictions involves significant judgment in identifying uncertain tax positions, estimating the amount of deferred tax assets that will be realized in the future and the impact of uncertainties in the application of complex tax laws. Resolution of these uncertainties in a manner inconsistent with our expectations could have a material impact on our operations and financial condition. For the years ended September 30, 2025 and 2024, we had no unrecognized tax benefit.

Deferred income taxes arise from temporary differences between the tax basis of assets and liabilities and their reported amounts in the financial statements, which will result in taxable or deductible amounts in the future. We record a valuation allowance to reduce our deferred tax assets to the amount that is more likely than not to be realized. In evaluating our ability to recover our deferred tax assets in the jurisdiction from which they arise, we consider all available positive and negative evidence, including scheduled reversals of deferred tax liabilities, projected future taxable income, tax-planning strategies and results of recent operations. It is difficult to conclude that a valuation allowance is not needed when the negative evidence includes cumulative losses in recent years. If we were to determine that it is more likely than not that we would not be able to realize all or part of our net deferred tax assets in the future, an adjustment to the deferred tax assets would be charged to earnings in the period such determination is made. Likewise, if we later determine that it is more likely than not that all or part of the net deferred tax assets would be realized, a tax benefit would be realized when all or part of the previously provided valuation allowance would be reversed. As of September 30, 2025, we have significant U.S. deferred tax assets that have a full valuation allowance. Any changes to the judgments related to our valuation allowance could have a material impact on our results of operations. For the years ended September 30, 2025 and 2024, we had net deferred tax assets of \$1.0 million and \$0.2 million.

Inventory Valuation. We value our inventory at the lower of cost or net realizable value. Inventory cost includes the purchase price of parts or finished goods and freight and/or other overhead costs incurred to receive the inventory into our manufacturing facilities. We regularly review inventory quantities and record a write-down to net realizable

value for excess and obsolete inventory. The write-down is primarily based on purchase history, historical inventory usage adjusted for expected changes in product demand, product offerings and production requirements. Our industry is characterized by customers in highly-cyclical industries, rapid technological changes, frequent new product developments and rapid product obsolescence. Changes in demand for our products or to our product offerings could result in further write-downs, which could have a material impact on our results of operations.

During the year ended September 30, 2025, we recorded provisions to reduce inventories to their lower of cost and net realizable value of approximately \$6.6 million compared to \$2.8 million during the year ended September 30, 2024.

Business Combination. We follow the acquisition method of accounting to record identifiable assets acquired and liabilities assumed in connection with acquired businesses at their estimated fair value as of the date of acquisition.

Identifiable intangible assets from business combinations are recognized at their estimated fair values as of the date of acquisition and consist of non-compete agreements, backlog, customer relationships, developed technology and trade names. Determination of the estimated fair value of identifiable intangible assets requires judgment. The fair value of acquired identifiable intangible assets were estimated using various valuation methodologies. The multi-period excess earnings method was used to value the acquired developed technology and the distributor method for the acquired customer relationships. Both approaches are income-based methods, which required judgment in estimating appropriate discount rates, obsolescence, customer attrition, and remaining useful lives. Any adverse change in these factors, among others, could have a significant effect on the valuation of the intangible assets and could have a material effect on our consolidated financial statements. The acquired intangible assets all had finite lives, ranging from one to ten years. The fair value of identifiable intangible assets acquired in connection with our acquisition of Entrepix was \$13.6 million. Goodwill represents the excess of the fair value of the consideration conveyed in an acquisition over the fair value of net assets acquired.

Goodwill. We perform an annual impairment test as of September 30, or more frequently if indicators of potential impairment exist, to determine whether the fair value of a reporting unit in which goodwill resides is less than its carrying value. If, based on the review of the qualitative factors, we determine it is not more likely than not that the fair value of a reporting unit is less than its carrying value, we would bypass the quantitative impairment test. We have determined that our reporting units are the same as our reporting segments.

When evaluating goodwill for impairment, we may first perform a qualitative assessment whether it is more likely than not that a reporting unit's carrying amount exceeds its fair value, referred to as a "step zero" approach. Events or circumstances we consider in performing the "step zero" qualitative assessment include macro-economic conditions, market and industry conditions, internal cost factors, share price fluctuations, and the operational stability and overall financial performance of the reporting units. If we conclude that it is more likely than not that a reporting unit's fair value is less than its carrying amount, we would perform the first step of the goodwill impairment test.

The first step of the goodwill impairment test, which compares the fair value of the reporting unit to its carrying value. If the fair value of the reporting unit exceeds the carrying value of the net assets assigned to that unit, goodwill is not considered impaired, and we are not required to perform additional analysis. If the carrying value of the net assets assigned to the reporting unit exceeds the fair value of the reporting unit, we would recognize an impairment charge for the amount by which the carrying amount exceeds the reporting unit's fair value (although the loss would not exceed the total amount of goodwill allocated to the reporting unit).

Determining the fair value of a reporting unit involves the use of significant estimates and assumptions. Our goodwill impairment test uses a weighting of the income approach and the market approach to estimate a reporting unit's fair value. The income approach is based on a discounted future cash flow analysis that uses certain assumptions including: projections of revenues and expenses and related cash flows based on assumed long-term growth rates and demand trends; expected future investments and working capital requirements to sustain and grow the business; and estimated discount rates based on the reporting unit's weighted average cost of capital as derived by the Capital Asset Pricing Model and other methods, which includes observable market inputs and other data from identified comparable companies. The same estimates are also used internally for our capital budgeting process, and for long-term and short-term business planning and forecasting. We test the reasonableness of the inputs and

outcomes of our discounted cash flow analysis against available comparable market data, and we also perform a reconciliation of our total market capitalization to the estimated fair value of all of our reporting units. The market approach is based on the application of appropriate market-derived multiples selected from (i) comparable publicly-traded companies and/or (ii) the implied transaction multiples derived from identified merger and acquisition activity in the market. Multiples are then selected based on a comparison of the reviewed data to that of the reporting unit and applied to relevant historical and forecasted financial parameters such as levels of revenues, EBITDA, EBIT or other metrics. If actual results differ significantly from our projections, we may be required to record a material impairment charge.

As of March 31, 2025, the Company lowered its guidance for the second quarter of fiscal year 2025 and reset projections for future periods due to prolonged weakness in the mature node semiconductor market driven by high inventory, tepid demand, and geopolitical tensions. As a result, we recognized impairment of our goodwill of \$15.4 million at our Semiconductor Fabrication Solutions segment and \$5.0 million at our Thermal Processing Solutions segment. At the end of December 2023, we identified a triggering event. As a result of the decline in our stock price as of December 31, 2023, our book value materially exceeded our market value leading to a \$6.4 million impairment charge in fiscal 2024. The impairment testing as of September 30, 2024, resulted in the fair value of our Thermal Processing Solutions segment exceeding its carrying value by approximately 44%, and the fair value of our Semiconductor Fabrication Solutions segment exceeding its carrying value by approximately 18%, resulting in no additional goodwill impairment. See Note 9 for additional information on goodwill by segment.

Long-Lived Asset Impairment. Long-lived assets, including tangible and intangible assets with finite lives, are amortized over their respective lives to their estimated residual values and are also reviewed for impairment whenever certain triggering events may indicate impairment. When such events or changes in circumstances occur, a recoverability test is performed comparing projected undiscounted cash flows from the use and eventual disposition of an asset group to its carrying value. If the estimated undiscounted cash flows are not sufficient to recover the carrying value of the asset group, the Company then compares the carrying value of the individual long-lived assets with their estimated fair values. An impairment would be recorded for the excess of the carrying value over the fair value. If actual results differ significantly from our projections, we may be required to record a material impairment charge.

As of September 30, 2025 and 2024, the Company performed a qualitative impairment test on intangible assets and goodwill and concluded there was no further impairment. As of March 31, 2025, the Company lowered its guidance for the second quarter of fiscal year 2025 and reset projections for future periods due to prolonged weakness in the mature node semiconductor market driven by high inventory, tepid demand, and geopolitical tensions. As a result, we recorded intangible asset impairment of \$2.6 million in our Semiconductor Fabrication Solutions segment. As of December 31, 2023, we identified a triggering event due to the decline in our stock price driving our market value materially below our book value. As a result, we recorded a \$1.3 million impairment charge in fiscal 2024 to the intangible assets in our Semiconductor Fabrication Solutions segment. See Note 8 for additional information on intangible assets.

Impact of Recently Issued Accounting Pronouncements

For discussion of recently issued accounting pronouncements, see “Recently Issued Accounting Pronouncements” within “Note 1. Summary of Operations and Significant Accounting Policies” in “Item 8. Financial Statements and Supplementary Data.”

ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

As a smaller reporting company, as defined by Rule 12b-2 of the Exchange Act and in Item 10(f)(1) of Regulation S-K, we are electing scaled disclosure reporting obligations and, therefore, are not required to provide the information requested by this Item.

ITEM 8. FINANCIAL STATEMENTS AND SUPPLEMENTARY DATA

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Shareholders and Board of Directors
Amtech Systems, Inc.:

Opinion on the Consolidated Financial Statements

We have audited the accompanying consolidated balance sheets of Amtech Systems, Inc. and subsidiaries (the Company) as of September 30, 2025 and 2024, the related consolidated statements of operations, comprehensive income (loss), shareholders' equity, and cash flows for each of the years in the two-year period ended September 30, 2025, and the related notes (collectively, the consolidated financial statements). In our opinion, the consolidated financial statements present fairly, in all material respects, the financial position of the Company as of September 30, 2025 and 2024, and the results of its operations and its cash flows for each of the years in the two-year period ended September 30, 2025, in conformity with U.S. generally accepted accounting principles.

Basis for Opinion

These consolidated financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these consolidated financial statements based on our audits. We are a public accounting firm registered with the Public Company Accounting Oversight Board (United States) (PCAOB) and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the consolidated financial statements are free of material misstatement, whether due to error or fraud. The Company is not required to have, nor were we engaged to perform, an audit of its internal control over financial reporting. As part of our audits, we are required to obtain an understanding of internal control over financial reporting but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control over financial reporting. Accordingly, we express no such opinion.

Our audits included performing procedures to assess the risks of material misstatement of the consolidated financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence regarding the amounts and disclosures in the consolidated financial statements. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements. We believe that our audits provide a reasonable basis for our opinion.

Critical Audit Matter

The critical audit matter communicated below is a matter arising from the current period audit of the consolidated financial statements that was communicated or required to be communicated to the audit committee and that: (1) relates to accounts or disclosures that are material to the consolidated financial statements and (2) involved our especially challenging, subjective, or complex judgments. The communication of a critical audit matter does not alter in any way our opinion on the consolidated financial statements, taken as a whole, and we are not, by communicating the critical audit matter below, providing a separate opinion on the critical audit matter or on the accounts or disclosures to which it relates.

Valuation of the Company's reporting units

As discussed in Notes 1 and 9 to the consolidated financial statements, the Company evaluates goodwill for impairment on an annual basis as of September 30, or when it is determined that it is more likely than not that the fair value of a reporting unit is less than its carrying amount. The Company's goodwill impairment test uses a weighting of the income and market approaches to estimate a reporting unit's fair value. The income approach is based on a discounted future cash flow analysis and involves the use of assumptions, including projections of revenues and expenses, long-term growth rates, and estimated discount rates. During the three months ended March 31, 2025, the Company performed an interim quantitative assessment for goodwill impairment that indicated that the carrying values of the Company's reporting units exceeded their estimated fair values, resulting in goodwill

impairment charges of \$15.4 million for the Semiconductor Fabrication Solutions reporting unit and \$5.0 million for the Thermal Processing Solutions reporting unit. As of September 30, 2025, the Company has \$0.9 million of goodwill, which relates to the Semiconductor Fabrication Solutions reporting unit.

We identified the evaluation of the fair values of the Company's reporting units as of March 31, 2025 as a critical audit matter. A high degree of subjective auditor judgment was required to evaluate the key assumptions used in the discounted future cash flow analysis to estimate the fair values of the Company's reporting units. Specifically, minor changes to key assumptions, including projected revenue and expenses, long-term growth rates, and estimated discount rates, could have a significant effect on the Company's assessment of the fair value of each reporting unit. Additionally, the use of professionals with specialized skills and knowledge was required to assess these key assumptions.

The following are the primary procedures we performed to address this critical audit matter. We evaluated the design of certain internal controls related to the Company's goodwill impairment process, including controls over the development of key assumptions and the determination of the estimated fair values of the Company's reporting units. We evaluated each reporting unit's projected revenue and expenses by comparing them to the historical results of the reporting unit and assessing the impacts of internal and/or external economic factors. In addition, we involved valuation professionals with specialized skills and knowledge, who assisted in:

- evaluating the Company's long-term growth rate for each reporting unit by comparing it to a long-term growth rate range that was independently developed using publicly available industry and economic growth rates
- evaluating the Company's discount rate for each reporting unit by comparing it to a discount rate that was independently developed using publicly available market data for comparable companies.

/s/ KPMG LLP

We have served as the Company's auditor since 2024.

Phoenix, Arizona
December 10, 2025

**Notes to Consolidated Financial Statements
For the Years Ended September 30, 2025 and 2024**

1. Summary of Operations and Significant Accounting Policies

Description of Business – Amtech provides equipment, consumables and services for semiconductor device packaging, wafer production and device fabrication. Our products are used to fabricate and package semiconductor devices, such as graphic processing units (GPU’s) used in AI applications, silicon carbide (SiC) and silicon (Si) power devices and other optical, analog and digital devices. We sell these products to semiconductor device packaging, electronic assembly and device fabrication companies worldwide.

We serve niche markets in industries that are experiencing technological advances, and which historically have been very cyclical. Therefore, future profitability and growth depend on our ability to develop or acquire and market profitable new products and on our ability to adapt to cyclical trends.

Our fiscal year is from October 1 to September 30. Unless otherwise stated, references to the years 2025 and 2024 relate to the fiscal years ended September 30, 2025 and 2024, respectively.

Principles of Consolidation – The consolidated financial statements include the accounts of the Company and our wholly-owned subsidiaries. All intercompany balances and transactions have been eliminated in consolidation.

Use of Estimates – The preparation of Consolidated Financial Statements in conformity with US GAAP requires us to make estimates and judgments that affect the amounts reported in our Consolidated Financial Statements and the accompanying notes. Significant items subject to such estimates and assumptions include the useful lives of property, plant and equipment, realizability of intangible assets, deferred costs and deferred tax assets, standalone selling prices and future contract volumes and the direct costs to complete the performance obligation for revenue recognition, fair value of stock options, performance-based restricted stock units and warrants.

Cash and Cash Equivalents – We consider all highly liquid investments with a maturity of three months or less when purchased to be cash equivalents. Our cash and cash equivalents consist of amounts invested in U.S. money market funds and various U.S. and foreign bank operating and time deposit accounts.

We maintain our cash and cash equivalents in multiple financial institutions. Balances in the United States, which account for approximately 75% and 66% of total cash balances as of September 30, 2025 and 2024, respectively, are primarily invested in financial institutions insured by the FDIC as well as a money market account. The remainder of our cash is maintained with financial institutions with reputable credit in China, Singapore, the UK and Malaysia. We maintain cash in bank accounts in amounts which at times may exceed federally insured limits. At September 30, 2025 and 2024, account balances exceeded insured limits by approximately \$12.0 million and \$5.7 million, respectively. We have not experienced any losses on such accounts.

Accounts Receivable and Allowance for Credit Losses – Accounts receivable are recorded at the sales price of products sold to customers on trade credit terms. We establish a valuation allowance to reflect our best estimate of expected losses inherent in our accounts receivable balance. The allowance is based on our evaluation of the aging of the receivables, historical write-offs, the current economic environment and communications with the customer. We write off individual accounts against the allowance when we no longer believe that it is probable that we will collect the receivable because we become aware of a customer’s inability to meet its financial obligations.

The following is a summary of the activity in our allowance for credit losses, in thousands:

	Years Ended September 30,	
	2025	2024
Balance at beginning of year	\$ 103	\$ 146
Provision	30	18
Write offs	1	(48)
Adjustment ⁽¹⁾	(21)	(13)
Balance at end of year	<u>\$ 113</u>	<u>\$ 103</u>

(1) Primarily foreign currency translation adjustments.

Our net accounts receivable as of September 30, 2025 and 2024 was \$19.9 million and \$22.0 million, respectively.

Inventories – We value our inventory at the lower of cost (first-in, first-out method) or net realizable value. Inventory cost includes the purchase price of parts or finished goods, labor, overhead and any freight cost incurred to receive the inventory into our manufacturing facilities. We regularly review inventory quantities and record a write-down to net realizable value for excess and obsolete inventory. The write-down is primarily based on historical inventory usage adjusted for expected changes in product demand and production requirements. Our industry is characterized by customers in highly-cyclical industries, rapid technological changes, frequent new product developments and rapid product obsolescence. Changes in demand for our products could result in further write-downs.

Other Current Assets – Other current assets consist of vendor deposits and prepaid expenses. No item included in other current assets makes up more than 5% of total current assets.

Property, Plant and Equipment – Property, plant and equipment are recorded at cost upon acquisition. We begin depreciation and amortization when an asset is both in the location and condition for its intended use. Maintenance and repairs are charged to expense as incurred. The cost of property retired or sold and the related accumulated depreciation and amortization are removed from the applicable accounts when disposition occurs and any gain or loss is recognized. Depreciation and amortization are computed using the straight-line method over the estimated useful life of the asset. Useful lives for equipment and machinery range from three to seven years; for leasehold improvements from three to fifteen years; for furniture and fixtures from five to ten years; for software from three to seven years and for buildings from 20 to 30 years.

Reviews are regularly performed to determine whether facts and circumstances exist which indicate that the useful life is shorter than originally estimated or the carrying amount of assets may not be recoverable. Impairment, if any, is based on the excess of the carrying amount over the estimated fair value of those assets.

Leases – We determine if a contract or arrangement is, or contains, a lease at inception. Balances related to operating leases are included in right-of-use ("ROU") assets in our Consolidated Balance Sheets. Balances related to financing leases are immaterial and are included in property, plant and equipment, operating lease liabilities, finance lease liabilities and long-term debt in our Consolidated Balance Sheets. ROU assets represent our right to use an underlying asset for the lease term and lease liabilities represent our obligation to make lease payments arising from the lease.

ROU assets and lease liabilities are recognized at commencement date based on the present value of lease payments over the lease term. As none of our leases provide an implicit rate, we use our incremental borrowing rate based on the information available at commencement date in determining the present value of lease payments. The ROU asset includes any prepaid lease payments and additional direct costs and excludes lease incentives. Our lease terms may include options to extend or terminate the lease, which we include in the recognition of the ROU asset and lease liability, when it is reasonably certain that we will exercise that option.

We lease office space, buildings, land, vehicles and equipment. We made an accounting policy election not to separate non-lease components from lease components for all existing classes of underlying assets with the exception of land and buildings. Lease agreements with an initial term of 12 months or less with no renewal options are not recorded on the balance sheet. Instead, we recognize the lease expense as incurred over the lease term. Our lease agreements do not contain any material residual value guarantees or material restrictive covenants. We have one lease that requires the underlying asset to be returned to its original condition at the end of the lease term. The related asset retirement obligation, which is immaterial, is reflected within other long-term liabilities in our Consolidated Balance Sheets.

Certain lease agreements include one or more options to renew, with individual option terms that can extend the lease term from one to five years. The exercise of lease renewal options is at our sole discretion. Some equipment leases also include options to purchase the leased property. The estimated life of assets and leasehold improvements are limited by the expected lease term, unless there is a transfer of title or purchase option reasonably certain of exercise.

In June 2022, we entered into a sale-leaseback transaction to facilitate a future move of our Massachusetts operations, pursuant to which we sold the property to a third party and agreed to lease the property back for two years. To determine whether the transfer of the property should be accounted for as a sale, we evaluated whether we transferred control to the third party in accordance with the revenue recognition guidance set forth in ASC 606. The transfer was deemed to be a sale at market terms. Therefore, we recognized the transaction price for the sale based on the cash proceeds received, derecognized the carrying amount of the underlying assets and recognized a gain in the Consolidated Statements of Operations for the difference between the carrying value of the asset and the transaction price. We then accounted for the leaseback in accordance with our lease accounting policy.

Intangible Assets – Intangible assets acquired in business combinations are capitalized and subsequently amortized on a straight-line basis over their estimated useful life. We review our intangible assets for impairment when events or circumstances indicate the carrying value may not be recoverable. When indicators exist, recoverability of assets is measured by a comparison of the carrying value of the asset group to the estimated undiscounted future net cash flows expected to be generated by the asset group. If the asset group is determined not to be recoverable, the Company performs an analysis of the fair value of the individual long-lived assets and will recognize an impairment loss when the fair value is less than the carrying value of such long-lived assets. Patent costs consist primarily of legal and filing fees incurred to file patents on proprietary methods and technology we developed. Patent costs are expensed when incurred, as they are insignificant.

In the second quarter of the year ended September 30, 2025 and first quarter of the year ended September 30, 2024, we recorded an impairment of definite lived intangible assets in our Semiconductor Fabrication Solutions segment. See Note 8 for a description of the facts and circumstances leading to the intangible asset impairment.

Goodwill – Goodwill is recorded when the purchase price paid for an acquisition exceeds the estimated fair value of net identified tangible and intangible assets acquired. Goodwill is not subject to amortization but is tested for impairment annually or when it is determined that it is more likely than not that the fair value of a reporting unit is less than its carrying amount. If it is concluded that there is impairment, we would recognize an impairment charge for the amount by which the carrying amount exceeds the reporting unit's fair value (although the loss would not exceed the total amount of goodwill allocated to the reporting unit). We have determined that our reporting units are the same as our reporting segments.

In the second quarter of the year ended September 30, 2025 we recorded impairment of goodwill in our Semiconductor Fabrication Solutions and Thermal Processing Solutions segments. In the first quarter of the year ended September 30, 2024, we recorded an impairment of goodwill in our Semiconductor Fabrication Solutions segment. Additional information on impairment testing of goodwill is set forth in Note 9.

In the fourth quarter of the year ended September 30, 2025, we performed a qualitative assessment whether it is more likely than not that a reporting unit's carrying amount exceeds its fair value, referred to as a "step zero" approach. Based on the review of the qualitative factors, we determined it is not more likely than not that the fair value of a reporting unit is less than its carrying value, we bypassed the quantitative impairment test. Events or circumstances we considered in performing the "step zero" qualitative assessment include macro-economic conditions, market and industry conditions, internal cost factors, share price fluctuations, and the operational stability and overall financial performance of the reporting units.

Revenue Recognition – We recognize revenue when a customer obtains control of promised goods or services in an amount that reflects the consideration expected to be received in exchange for those goods or services. A performance obligation is a promise in a contract to transfer a product or service to the customer. The transaction price of a contract is allocated to each distinct performance obligation based upon the relative standalone selling price ("SSP") for each performance obligation and is recognized as revenue upon satisfaction of the performance obligation. We have elected the practical expedient in ASC 606 whereby an entity need not adjust the promised amount of consideration for the effects of a significant financing component if the entity expects, at contract inception, that the period between when the entity transfers a promised good or service to a customer and when the customer pays for that good or service will be one year or less. We have also elected the practical expedient in ASC 606 whereby an entity may recognize revenue on an as-invoiced basis in certain cases where performance obligations are satisfied over time and the invoiced amount corresponds directly with the value provided to the customer. To record revenue properly, we apply the following five steps:

1) Identify the contract with the customer

A contract with a customer exists when (i) we enter into an enforceable contract with a customer that defines each party's rights regarding the goods or services to be transferred and identifies the related payment terms, (ii) the contract has commercial substance, and (iii) we determine that collection of substantially all consideration for goods and services that will be transferred is probable based on the customer's intent and ability to pay the promised consideration.

2) Identify the performance obligations in the contract

Performance obligations are identified based on the goods and services that will be transferred to the customer that are both (i) capable of being distinct, whereby the customer can benefit from the good or service either on its own or together with other available resources, and (ii) are distinct in the context of the contract, whereby the transfer of the good or service is separately identifiable from other promises to the customer in the contract. To the extent a contract includes multiple promised goods and services, we must apply judgment to determine whether promised goods and services are capable of being distinct and distinct in the context of the contract. If these criteria are not met, the promised goods and services are accounted for as a combined performance obligation.

Our equipment sales consist of multiple promises, including the delivery of the system itself and obligations that are not delivered simultaneously with the system, such as installation services and training. In most cases, these services require minimal effort and are immaterial in the context of the contract. Therefore, equipment and related services are treated as one performance obligation. Customers who purchase new systems are provided an assurance-type warranty, generally for periods of 12 to 36 months. Assurance-type warranties are not considered a performance obligation.

We account for shipping and handling activities that occur after control of the related good transfers as fulfillment activities instead of assessing such activities as performance obligations.

Our obligations for returns and/or refunds are immaterial in all periods presented.

3) Determine the transaction price

The transaction price is determined based on the consideration to which we will be entitled in exchange for transferring goods and services to the customer.

The transaction price is based on the price reflected in the individual customer's purchase order.

Occasionally, our customers earn a commission on the purchase and/or resale of our products. These payments to customers are recorded as a reduction of revenue and are less than 5% of our total revenues.

In substantially all of our sales transactions, we incur incremental costs to obtain contracts with customers, in the form of sales commissions. We maintain a commission program which rewards our sales representatives for system sales and our employees for system sales and other individual goals. We have elected a practical expedient to allow for the recognition of commission expense when incurred if the amortization period of the asset that the entity otherwise would have recognized is one year or less. Based on the nature of our contracts with customers, we expense all commissions as incurred based upon the expectation that the amortization period would be one year or less.

4) Allocate the transaction price to performance obligations in the contract

If the contract contains a single performance obligation, the entire transaction price is allocated to the single performance obligation. Contracts that contain multiple performance obligations require an allocation of the transaction price to each distinct performance obligation.

When required, the SSP for each performance obligation is based on observable data from standalone sales. To determine the SSP for labor-related performance obligations, we use directly observable inputs based on the standalone sale prices for these services.

5) Recognize revenue when, or as, we satisfy a performance obligation

We satisfy performance obligations either over time or at a point in time. Revenue is recognized over time if either (i) the customer simultaneously receives and consumes the benefits provided by our performance, (ii) our performance creates or enhances an asset that the customer controls as the asset is created or enhanced, or (iii) our performance does not create an asset with an alternative use to the entity and we have an enforceable right to payment for performance completed to date. If we do not satisfy a performance obligation over time, the related performance obligation is satisfied at a point in time by transferring the control of a promised good or service to a customer. For over time recognition, we are required to select a single revenue recognition method for the performance obligation that faithfully depicts our performance in transferring control of the goods and services.

Equipment and related product revenues (e.g., furnace systems, system add-ons, machinery, consumables and spare parts) are recognized at a point in time, when they are shipped or delivered, depending on contractual terms.

Revenue for services, including maintenance services, is recognized over time based on hours incurred, as the hours incurred align to the maintenance activities performed. We also utilize the as-invoiced practical expedient in certain cases where performance obligations are satisfied over time and the invoiced amount corresponds directly with the value provided to the customer.

We exclude from the transaction price all sales taxes that are assessed by a governmental authority and that are imposed on and concurrent with a specific revenue-producing transaction and collected from a customer (for example, sales, use, value added, and certain excise taxes). Sales taxes are presented on a net basis (excluded from revenues) in our Consolidated Statements of Operations. Our remaining performance obligations as of September 30, 2025, have an original duration of one year or less. Our customers generally have payment terms of 30-90 days. We do not have any payment terms that exceed one year from the point we have satisfied the related performance obligations.

Management reviews disaggregated revenue at the reportable segment level. Revenue-generating transactions vary between our reportable segments due to several factors. For example, lead times vary among our reportable segments and among our products. Most of the revenue for our Semiconductor Fabrication Solutions segment results from the sale of consumables, rather than equipment sales. These consumables have a much shorter production period than equipment produced by our other reportable segment. Due to these variations between reportable segments, management determined that disaggregated revenue by reportable segment sufficiently depicts how economic factors affect the nature, amount, timing and uncertainty of our revenue and cash flows. See Note 15 for additional information on our reportable segments.

Contract Assets – Contract assets consist of amounts we are not legally able to invoice but have completed the related performance obligation. These amounts generally arise from variances between the contractual payment terms and the transaction price assigned to the open performance obligations (e.g., we have recognized revenue in an amount greater than the amount that is billable under the contract). There were no contract assets at September 30, 2025 and 2024.

Contract Liabilities – Contract liabilities are reflected in current liabilities on the Consolidated Balance Sheets as all performance obligations are expected to be satisfied within the next 12 months. Contract liabilities include customer deposits and deferred revenue. Contract liabilities relate to payments invoiced or received in advance of completion of performance obligations under a contract. Contract liabilities are recognized as revenue upon the fulfillment of performance obligations.

The following is a summary of activity for contract liabilities, in thousands:

	Years Ended September 30,	
	2025	2024
Beginning balance	\$ 8,965	\$ 8,018
New deposits	461	5,442
Deferred revenue	51	168
Revenue recognized	(3,016)	(4,663)
Adjustment	—	—
Ending balance	<u>\$ 6,461</u>	<u>\$ 8,965</u>

Warranty – A limited warranty is provided free of charge, generally for periods of 12 to 36 months to all purchasers of our new products and systems. Accruals are recorded for estimated warranty costs at the time revenue is recognized. While our warranty costs have historically been within our expectations and we believe that the amounts accrued for warranty expenditures are sufficient for all systems sold through September 30, 2025, we cannot guarantee that our warranty costs will remain predictable. In addition, technological changes or previously unknown defects in raw materials or components may result in more extensive and frequent warranty service than anticipated, which could result in an increase in our warranty expense.

The following is a summary of activity in accrued warranty expense, in thousands:

	Years Ended September 30,	
	2025	2024
Beginning balance	\$ 602	\$ 965
Additions for warranties issued during the period	85	226
Costs incurred during the period	(16)	(19)
Changes related to pre-existing warranties	(277)	(570)
Ending balance	<u>\$ 394</u>	<u>\$ 602</u>

Shipping Expense – Shipping expenses were \$1.2 million and \$2.0 million for 2025 and 2024, respectively, and are included in selling, general and administrative expenses.

Employee Retention Tax – The Coronavirus Aid, Relief, and Economic Security Act (the “CARES Act”) provided an employee retention credit (“ERC”) which was a refundable tax credit against certain employment taxes. The Consolidated Appropriations Act (the “Appropriations Act”) extended and expanded the availability of the employee retention credit through December 31, 2021. The Appropriations Act amended the employee retention credit to be equal to 70% of qualified wages paid to employees during the 2021 calendar year. The Company qualified for the employee retention credit for qualified wages through December 2021 and filed a cash refund claim during the calendar year ended December 31, 2023. The employee retention credit in the amount of \$2.1 million was received in the Company’s third fiscal quarter of 2025 and recognized as a reduction to payroll tax expense on the Condensed Consolidated Statements of Operations for the three months ended June 30, 2025. The ERC was credited against cost of sales, selling, general and administrative, and research, development and engineering for \$1.0 million, \$0.8 million, and \$0.3 million, respectively.

Advertising Expense – Advertising costs are expensed as incurred. Advertising expenses were \$0.4 million and \$0.5 million for 2025 and 2024, respectively, and are included in selling, general and administrative expenses.

Stock-Based Compensation – We measure compensation costs relating to share-based payment transactions based upon the grant-date fair value of the award. Those costs are recognized as expense over the requisite service period, which is generally the vesting period, with forfeitures recognized as they occur. We estimate the fair value of stock option awards on the date of grant using the Black-Scholes option-pricing model. The Black-Scholes model requires us to apply estimates, including expected stock price volatility, expected life of the option and the risk-free interest rate. We issue new shares under our existing equity plans upon the exercise of stock options.

We recognize compensation expense associated with the issuance of RSUs over the requisite service period for each respective grant. The total compensation expense associated with RSUs represents the value based upon the number of RSUs awarded multiplied by the closing price of our common stock on the date of grant. Recipients of RSUs do not have voting or dividend rights until the vesting conditions are satisfied and shares are released. We issue new shares under our existing equity plans upon the vesting of RSUs.

Research, Development and Engineering Expenses – RD&E expenses consist primarily of the cost of employees, consultants and contractors who design, engineer and develop new products and processes as well as materials and supplies used in producing prototypes. RD&E expenses may vary from period to period depending on the engineering projects in process. Expenses related to engineers working on strategic projects or sustaining engineering projects are recorded in RD&E. However, from time to time we add functionality to our products or develop new products during engineering and manufacturing to fulfill specifications in a customer's order, in which case the cost of development, along with other costs of the order, are charged to cost of goods sold.

Foreign Currency Transactions and Translation – We use the U.S. dollar as our reporting currency. Our operations in the UK, China and other countries are primarily conducted in their functional currencies, the Euro, Renminbi, or the local country currency, respectively. Accordingly, assets and liabilities of the subsidiaries are translated into U.S. dollars at the exchange rate in effect at the balance sheet dates. Income and expense items are translated at the average exchange rate for each month within the year. The resulting translation adjustments are recorded directly in accumulated other comprehensive income (loss), net of tax - foreign currency translation adjustments as a separate component of shareholders' equity. Net foreign currency transaction gains/losses, including transaction gains/losses on intercompany balances that are not of a long-term investment nature and non-functional currency cash balances, are reported as a separate component of non-operating (income) expense in our Consolidated Statements of Operations.

Income Taxes – We file consolidated federal income tax returns in the United States for all subsidiaries except those in China, Singapore, Malaysia and the UK, where separate returns are filed. We account for income taxes under the asset and liability method, which requires the recognition of deferred tax assets and deferred tax liabilities for the expected future tax consequences of events that have been included in the financial statements. Under this method, we determine deferred tax assets and deferred tax liabilities on the basis of the differences between the financial statement and tax bases of assets and liabilities by using enacted tax rates in effect for the year in which the differences are expected to reverse. The effect of a change in tax rates on deferred tax assets and deferred tax liabilities is recognized in income in the period that includes the enactment date.

We recognize deferred tax assets to the extent we believe these assets are more likely than not to be realized. In making such a determination, we consider all available positive and negative evidence, including future reversals of existing taxable temporary differences, projected future taxable income, tax-planning strategies, carryback potential if permitted under the tax law and results of recent operations. If we determine that we are unable to realize our deferred tax assets, we make an adjustment to the deferred tax asset to recognize only the portion of the asset that is more likely than not to be realized by recording a valuation allowance.

We record uncertain tax positions in accordance with ASC 740 on the basis of a two-step process in which (1) we determine whether it is more likely than not that the tax positions will be sustained on the basis of the technical merits of the position and (2) for those tax positions that meet the more-likely-than-not recognition threshold, we recognize the largest amount of tax benefit that is more than 50 percent likely to be realized upon ultimate settlement with the related tax authority. We recognize interest and penalties related to uncertain tax benefits on the income tax expense line in the accompanying consolidated statement of operations. Accrued interest and penalties, if applicable, are included on the income taxes payable long-term line in the Consolidated Balance Sheets.

Concentrations of Credit Risk – Our customers are primarily manufacturers of semiconductor substrates and devices and electronic assemblies. Financial instruments that potentially subject us to significant concentrations of credit risk consist principally of cash and trade accounts receivable. Credit risk is managed by performing credit evaluations of the customers' financial condition, by requiring significant deposits where appropriate, and by actively monitoring collections. Letters of credit are required of certain customers depending on the size of the order, type of customer or its creditworthiness, and country of domicile.

As of September 30, 2025, two Thermal Processing Solutions customers individually represented 15% and 13% of accounts receivable. As of September 30, 2024, one Thermal Processing Solutions customer represented 12% of accounts receivable.

Refer to Note 17 for information regarding revenue and assets in other countries subject to fluctuation in foreign currency exchange rates.

Fair Value of Financial Instruments – We group our financial assets and liabilities measured at fair value on a recurring basis into three levels, based on the markets in which the assets and liabilities are traded and the reliability of the assumptions used to determine fair value. These levels are:

Level 1 – Valuation is based upon quoted market price for identical instruments traded in active markets.

Level 2 – Valuation is based on quoted market prices for similar instruments in active markets, quoted prices for identical or similar instruments in markets that are not active, and model-based valuation techniques for which all significant assumptions are observable in the market.

Level 3 – Valuation is generated from model-based techniques that use significant assumptions not observable in the market. Valuation techniques include use of discounted cash flow models and similar techniques.

It is our policy to use observable inputs whenever reasonably practicable in order to minimize the use of unobservable inputs when developing fair value measurements. When available, we use quoted market prices to measure fair value. If market prices are not available, the fair value measurement is based on models that use primarily market-based parameters including interest rate yield curves, option volatilities and currency rates. In certain cases, where market rate assumptions are not available, we are required to make judgments about assumptions market participants would use to estimate the fair value of a financial instrument. Changes in the underlying assumptions used, including discount rates and estimates of future cash flows, could significantly affect current or future valuations.

Cash, and Cash Equivalent – Included in cash and cash equivalents in the Consolidated Balance Sheets are money market funds and time deposit accounts. Cash equivalents are classified as Level 1 in the fair value hierarchy.

Receivables and Payables – The recorded amounts of these financial instruments, including accounts receivable and accounts payable, approximate their fair value because of the short maturities of these instruments.

Debt – The Loan Agreement was fully repaid in the fourth quarter of 2024, and was subsequently terminated effective September 11, 2024. The carrying value of debt under our Loan Agreement was based on fixed interest rates. The fair value for the Loan Agreement was estimated by discounting the future cash flows using the current rates at which similar loans would be made to borrowers with similar credit ratings and is therefore classified as Level 2 in the fair value hierarchy.

Recently Issued Accounting Pronouncements

In November 2024, the FASB issued ASU 2024-03, “Income Statement - Reporting Comprehensive Income - Expense Disaggregation Disclosures (Subtopic 220-40): Disaggregation of Income Statement Expenses” (“ASU 2023-07”), which requires disclosure of additional information about specific expense categories underlying certain income statement expense line items. This ASU is effective for our annual periods beginning October 1, 2027, and interim periods beginning October 1, 2028, and requires either prospective or retrospective application. We are currently evaluating the impact of this ASU on our disclosures.

In December 2023, the FASB issued ASU 2023-09, “Income Taxes (Topic 740): Improvements to Income Tax Disclosures” (“ASU 2023-09”), which requires additional annual income tax disclosures. These include a tabular rate reconciliation comprised of eight specific categories, the disaggregation of income taxes paid between federal, state, and foreign jurisdictions, and to disaggregate income from continuing operations before income tax expense and income tax expense from continuing operations between domestic and foreign. ASU 2023-09 eliminates the disclosure of the nature and estimate of reasonably possible changes to unrecognized tax benefits in the next 12

months or that an estimated range cannot be made. ASU 2023-09 is effective for fiscal years beginning on or after December 15, 2024, with early adoption permitted, and can be applied on a prospective or retrospective basis. We are currently evaluating the impact of this ASU on our disclosures.

In November 2023, the FASB issued ASU 2023-07, “Segment Reporting (Topic 280): Improvements to Reportable Segment Disclosures” (“ASU 2023-07”), which improves reportable segment disclosure requirements, primarily through enhanced disclosures about significant segment expenses. The ASU is effective for public business entities for fiscal years beginning after December 15, 2023, and for interim reporting periods within fiscal years beginning after December 15, 2024. Early adoption is permitted. The amendments in ASU 2023-07 should be applied retrospectively to all prior periods presented in the financial statements. We adopted ASU 2023-07 in our Form 10-K for the year ended September 30, 2025. The adoption of this guidance impacted our disclosures only and did not have a material impact. See Note 15 “Reportable Segments” for more information.

There were no other new accounting pronouncements issued or effective as of September 30, 2025 that had or are expected to have a material impact on our consolidated financial statements.

2. Earnings Per Share & Diluted Earnings Per Share

Basic EPS is computed by dividing net income by the weighted average number of common shares outstanding for the period. Diluted EPS is computed similarly to basic EPS except that the denominator is increased to include the number of additional common shares that would have been outstanding if potentially dilutive common shares had been issued. Dilutive potential common shares include outstanding RSUs and stock options. In the case of a net loss, diluted EPS is calculated in the same manner as basic EPS.

For the years 2025 and 2024, 939,000 and 798,000 weighted average shares, respectively, were excluded from the diluted EPS calculations because they were anti-dilutive. These share-based awards could become dilutive in the future.

A reconciliation of the denominators of the basic and diluted EPS calculations follows, in thousands, except per share amounts:

	<u>Years Ended September 30,</u>	
	<u>2025</u>	<u>2024</u>
Numerator:		
Net loss	\$ (30,326)	\$ (8,486)
Denominator:		
Weighted-average shares used to compute basic EPS	14,302	14,208
Dilutive potential common shares due to stock options (1)	—	—
Dilutive potential common shares due to RSUs (1)	—	—
Weighted-average shares used to compute diluted EPS	14,302	14,208
Loss per share:		
Net loss per basic share	\$ (2.12)	\$ (0.60)
Net loss per diluted share	\$ (2.12)	\$ (0.60)

(1) The number of common stock equivalents is calculated using the treasury stock method and the average market price during the period.

3. Severance

In 2025 and 2024, we recorded severance expense of \$0.7 million and \$0.4 million, respectively. This related primarily to staff reductions across our locations as we shifted more work to contract manufacturers and dealt with decreasing demand.

	Years Ended September 30,	
	2025	2024
Balance at beginning of the year	\$ —	\$ 154
Severance expense, net of adjustments	701	350
Cash payments	(701)	(504)
Balance at the end of the year	<u>\$ —</u>	<u>\$ —</u>

4. Inventories

The components of inventories are as follows, in thousands:

	September 30,	
	2025	2024
Purchased parts and raw materials	\$ 9,763	\$ 17,958
Work-in-process	7,113	6,934
Finished goods	1,867	1,975
	<u>\$ 18,743</u>	<u>\$ 26,867</u>

We recorded \$6.0 million related to the write-off of inventory for closing of a product line in the year ended September 30, 2025. We recorded \$0.4 million related to the write-off of inventory for our polishing machine products in the year ended September 30, 2024.

5. Property, Plant and Equipment

The following is a summary of property, plant and equipment, in thousands:

	September 30,	
	2025	2024
Building and leasehold improvements	\$ 6,244	\$ 5,985
Equipment and machinery	9,093	9,928
Furniture and fixtures	3,506	2,588
Software	1,986	1,986
	20,829	20,487
Accumulated depreciation and amortization	(10,602)	(8,840)
	<u>\$ 10,227</u>	<u>\$ 11,647</u>

Depreciation was \$2.3 million and \$2.1 million in 2025 and 2024, respectively.

6. Sale and Leaseback of Real Estate

On June 23, 2022, BTU completed the sale and leaseback of its building in Massachusetts (the “Property”). The sale price was \$20.6 million, of which \$0.7 million was deducted at closing for commission and other closing expenses. Simultaneously with the closing, BTU entered into a two-year leaseback of the Property. The lease terms include annual base rent of \$1.5 million in an absolute triple net lease. In connection with the sale, BTU recognized a pre-tax gain on sale of \$12.5 million in 2022, which is recorded within operating expenses on the Consolidated Statement of Operations. This sale-leaseback transaction resulted in a net cash inflow of approximately \$14.9 million in 2022, after repayment of the existing mortgage and settlement of related sale expenses. The leaseback ended in the third quarter of 2024.

7. Leases

The following table provides information about the financial statement classification of our lease balances reported within the Consolidated Balance Sheets, in thousands:

	September 30,	
	2025	2024
Assets		
Right-of-use assets - operating	\$ 18,293	\$ 16,596
Right-of-use assets - finance	247	227
Total right-of-use assets	<u>\$ 18,540</u>	<u>\$ 16,823</u>
Liabilities		
Current		
Operating lease liabilities	\$ 1,903	\$ 2,041
Finance lease liabilities	126	101
Total current portion of long-term lease liabilities	<u>2,029</u>	<u>2,142</u>
Long-term		
Operating lease liabilities	17,316	15,240
Finance lease liabilities	168	189
Total long-term lease liabilities	<u>17,484</u>	<u>15,429</u>
Total lease liabilities	<u>\$ 19,513</u>	<u>\$ 17,571</u>

The following table provides information about the financial statement classification of our lease expenses reported in the Consolidated Statements of Operations, in thousands:

Lease cost	Classification	Years Ended September 30,	
		2025	2024
Operating lease cost	Cost of sales	\$ 1,812	\$ 2,202
Operating lease cost	Selling, general and administrative expenses	1,483	1,409
Operating lease cost	Research, development and engineering	12	12
Finance lease cost	Cost of sales	—	2
Finance lease cost	Selling, general and administrative expenses	104	114
Total lease cost		<u>\$ 3,411</u>	<u>\$ 3,739</u>

Future minimum lease payments under non-cancelable leases as of September 30, 2025 are as follows, in thousands:

Years Ending September 30,	Operating Leases	Finance Leases	Total
2026	\$ 3,175	\$ 143	\$ 3,318
2027	3,281	104	3,385
2028	3,349	31	3,380
2029	3,422	23	3,445
2030	3,169	19	3,188
Thereafter	8,563	—	8,563
Total lease payments	24,959	320	25,279
Less: Interest	5,740	26	5,766
Present value of lease liabilities	<u>\$ 19,219</u>	<u>\$ 294</u>	<u>\$ 19,513</u>

Operating lease payments include \$2.3 million related to options to extend lease terms that are reasonably certain of being exercised.

The following table provides information about the remaining lease terms and discount rates applied:

	September 30,	
	2025	2024
Weighted average remaining lease term		
Operating leases	7.57 years	8.47 years
Finance leases	2.76 years	2.73 years
Weighted average discount rate		
Operating leases	6.91%	6.58%
Finance leases	6.85%	6.43%

8. Intangible Assets

Intangible assets consist of the following, in thousands:

	Amortization Period	September 30,	
		2025	2024
Backlog	1 year	\$ —	\$ 2,100
Customer relationships	6-10 years	4,409	4,409
Developed technology	1.75 years	—	6,700
Noncompetition agreements	5 years	—	200
Trade names	3-15 years	2,679	2,679
		7,088	16,088
Accumulated amortization		(3,039)	(5,616)
Less asset impairments:			
Backlog		—	(425)
Customer relationships		(2,111)	(339)
Developed technology		—	(5,494)
Noncompetition agreements		—	(160)
Trade names		(847)	(50)
Intangible assets, net		\$ 1,091	\$ 4,004

Intangible assets are amortized over a weighted-average amortization period of 6.5 years. Our customer relationship and trade name intangible assets are amortized over weighted-average amortization periods of 2.0 and 4.5 years, respectively.

We review our intangible assets for impairment when events or circumstances indicate the carrying value may not be recoverable. Except as discussed below, we concluded that a triggering event had not occurred that would more likely than not reduce the fair value of intangible assets below their carrying value. At the end of December 2023, we identified a triggering event. As a result of the decline in our stock price as of December 31, 2023, our book value materially exceeded our market value. As discussed in the Goodwill section below, this resulted in a triggering event for impairment of goodwill. The results of the goodwill impairment test indicated that the book value of our Semiconductor Fabrication Solutions reporting unit was in excess of the fair value, and, thus, was impaired. Prior to recognizing any impairment of goodwill, we tested the related long-lived assets for impairment in our Semiconductor Fabrication Solutions segment. We tested each identified asset group within our Semiconductor Fabrication Solutions segment by first performing a recoverability test, comparing projected undiscounted cash flows from the use and eventual disposition of each asset group to its carrying value. This test indicated that the undiscounted cash flows were not sufficient to recover the carrying value of certain asset groups. We then compared the carrying value of the individual long-lived assets within those asset groups against their fair value in order to determine if impairment existed. Determining the fair value of those asset groups involves the use of significant estimates and assumptions, including projections of revenues and expenses and related cash flows based on assumed long-term growth rates and demand trends, and estimated discount rates based on the asset group's weighted average return on assets, as derived from various methods. The fair value of the intangible assets were estimated using

various valuation methodologies, including the multi-period excess earnings method, the relief from royalty method and the distributor method. These fair value measurements fall under Level 3 of the fair value hierarchy. As a result, we recorded a total impairment charge for intangible assets in our Semiconductor Fabrication Solutions segment of \$1.3 million during the quarter ended December 31, 2023. This impairment charge relates to developed technology, trade name, customer relationships and non-competition agreements at Entrepix.

Additionally, at the end of March 2025, the Company lowered its guidance for the second quarter of fiscal year 2025 and reset projections for the rest of the year due to a prolonged weakness in the mature node semiconductor market driven by high inventory, tepid demand, and geopolitical tensions. As disclosed in the Goodwill section below, this resulted in a triggering event for impairment of goodwill. The results of the goodwill impairment test indicated that the book value of our Semiconductor Fabrication Solutions segment and Thermal Processing Solutions segment was in excess of fair value and was impaired. Prior to recognizing any impairment of goodwill, we tested the related long-lived assets for impairment in our Semiconductor Fabrication Solutions and Thermal Processing Solutions segments. We tested each identified asset group within each segment by first performing a recoverability test, comparing projected undiscounted cash flows from the use and eventual disposition of each asset group to its carrying value. This test indicated that the undiscounted cash flows were not sufficient to recover the carrying value of certain asset groups within our Semiconductor Fabrication Solutions segment. We then compared the carrying value of the individual long-lived assets within those asset groups against their fair value in order to determine if impairment existed. Determining the fair value of those asset groups involves the use of significant estimates and assumptions, including projections of revenues and expenses and related cash flows based on assumed long-term growth rates and demand trends, and estimated discount rates based on the asset group's weighted average return on assets, as derived from various methods. The fair value of the intangible assets was estimated using various valuation methodologies, including the multi-period excess earnings method and the relief from royalty method and the distributor method. These fair value measurements fall under Level 3 of the fair value hierarchy. As a result, we recorded a total impairment charge for intangible assets in our Semiconductor Fabrication Solutions segment of \$2.6 million during the quarter ended March 31, 2025. The \$2.6 million impairment consists of \$1.8 million for customer relationships and \$0.8 million for trade names primarily at Entrepix.

Amortization expense related to intangible assets was \$0.3 million and \$0.8 million in 2025 and 2024, respectively. Future amortization expense for the remaining unamortized balance as of September 30, 2025 is estimated as follows, in thousands:

Years Ending September 30,	Amortization Expense
2026	\$ 177
2027	177
2028	177
2029	177
2030	138
Thereafter	245
Total	\$ 1,091

9. Goodwill

The changes in the carrying amount of goodwill, by reportable segment, are as follows, in thousands:

	Thermal Processing Solutions	Semiconductor Fabrication Solutions	Total Goodwill
Goodwill	\$ 5,905	\$ 21,726	\$ 27,631
Accumulated impairment losses	—	(6,370)	(6,370)
Balance at September 30, 2024	5,905	15,356	21,261
Goodwill acquired	—	—	—
Impairment of goodwill	(4,997)	(15,356)	(20,353)
Balance at September 30, 2025	\$ 908	\$ —	\$ 908
Goodwill	\$ 5,905	\$ 15,356	\$ 21,261
Accumulated impairment losses	(4,997)	(15,356)	(20,353)
Balance at September 30, 2025	\$ 908	\$ —	\$ 908

On January 17, 2023, we acquired Entrepix, which has been integrated into our Semiconductor Fabrication Solutions segment. Under the purchase method of accounting, the purchase price for the acquisition was allocated to the tangible and identifiable intangible assets acquired and liabilities assumed based on their estimated fair values. The excess purchase price over fair value of net assets acquired of approximately \$16.5 million was recorded as goodwill in the Semiconductor Fabrication Solutions segment. The primary driver for this acquisition was to add CMP and wafer cleaning equipment to our existing substrate polishing and wet process chemical offerings.

We review goodwill for impairment when events or circumstances indicate the carrying value may not be recoverable. We performed our annual test of goodwill impairment as of September 30, 2025 and 2024. The results of the goodwill impairment test indicated that the fair value of both our Thermal Processing and Semiconductor Fabrication Solutions reporting units were in excess of the carrying value, and, thus, were not impaired. At the end of December 2023, we identified a triggering event. As a result of the decline in our stock price as of December 31, 2023, our book value materially exceeded our market value leading to a \$6.4 million impairment charge in fiscal 2024. Additionally, as of March 31, 2025, the Company lowered its guidance for the second quarter of fiscal year 2025 and reset projections for future periods due to prolonged weakness in the mature node semiconductor market driven by high inventory, tepid demand, and geopolitical tensions. This triggering event indicated a need to test goodwill for impairment. The goodwill impairment test indicated book value was in excess of fair value by \$15.4 million for our Semiconductor Fabrication Solutions segment and \$5.0 million for our Thermal Processing Solutions segment. As a result, we recorded a \$20.4 million impairment charge in the period ended March 31, 2025.

Determining the fair value of a reporting unit involves the use of significant estimates and assumptions. Our goodwill impairment test uses a weighting of the income approach and the market approach to estimate a reporting unit's fair value. The income approach is based on a discounted future cash flow analysis that uses certain assumptions including: projections of revenues and expenses and related cash flows based on assumed long-term growth rates and demand trends; expected future investments and working capital requirements to sustain and grow the business; and estimated discount rates based on the reporting unit's weighted average cost of capital as derived by the Capital Asset Pricing Model and other methods, which includes observable market inputs and other data from identified comparable companies. The same estimates are also used internally for our capital budgeting process, and for long-term and short-term business planning and forecasting. We test the reasonableness of the inputs and outcomes of our discounted cash flow analysis against available comparable market data, and we also perform a reconciliation of our total market capitalization to the estimated fair value of all of our reporting units. The market approach is based on the application of appropriate market-derived multiples selected from (i) comparable publicly-traded companies and/or (ii) the implied transaction multiples derived from identified merger and acquisition activity in the market. Multiples are then selected based on a comparison of the reviewed data to that of the reporting unit and applied to relevant historical and forecasted financial parameters such as levels of revenues, EBITDA, EBIT or other metrics. The calculation of fair value falls under Level 3 of the fair value hierarchy.

10. Income Taxes

Income Tax (Benefit) Provision

The components of (loss) income before (benefit) provision for income taxes are as follows, in thousands:

	Years Ended September 30,	
	2025	2024
Domestic	\$ (32,790)	\$ (9,563)
Foreign	4,798	2,052
	<u>\$ (27,992)</u>	<u>\$ (7,511)</u>

The components of the provision for income taxes are as follows, in thousands:

	Years Ended September 30,	
	2025	2024
Current:		
Domestic federal	\$ 56	\$ (49)
Foreign	2,295	793
Foreign withholding taxes	814	279
Domestic state	19	36
Total current	<u>3,184</u>	<u>1,059</u>
Deferred:		
Domestic federal	—	—
State	—	—
Foreign	(850)	(84)
Total deferred	<u>(850)</u>	<u>(84)</u>
Total provision	<u>\$ 2,334</u>	<u>\$ 975</u>

A reconciliation of actual income taxes to income taxes at the expected U.S. federal corporate income tax rate is as follows, in thousands, except percentages:

	Years Ended September 30,			
	2025		2024	
Tax (benefit) expense at the federal statutory rate	\$ (5,878)	21.0%	\$ (1,577)	21.0%
Effect of permanent book-tax differences	101	-0.4%	152	-2.0%
State tax provision	(168)	0.6%	18	-0.3%
Valuation allowance for net deferred tax assets	2,496	-8.9%	1,179	-15.7%
Tax rate differential	279	-1.0%	301	-4.0%
Goodwill impairment	4,089	-14.6%	1,334	-17.8%
Withholding taxes	814	-2.9%	279	-3.7%
Other items	601	-2.1%	(711)	9.5%
	<u>\$ 2,334</u>	<u>-8.3%</u>	<u>\$ 975</u>	<u>-13.0%</u>

Deferred Income Taxes and Valuation Allowance

Deferred income taxes reflect the tax effects of temporary differences between the financial statement and tax bases of assets and liabilities by using enacted tax rates in effect for the year in which the differences are expected to be realized. The components of deferred tax assets and deferred tax liabilities are as follows, in thousands:

	September 30,	
	2025	2024
Deferred tax assets:		
Net operating loss carryforwards	\$ 18,785	\$ 17,699
Accruals and reserves	2,653	1,983
Income tax credits	3,255	2,163
Operating lease liabilities	4,361	4,150
Research and development costs	1,427	1,531
Foreign service fee	745	1,579
Other assets	940	878
Total deferred tax assets	32,166	29,983
Valuation allowance	(25,088)	(22,658)
Deferred tax assets, net of valuation allowance	7,078	7,325
Deferred tax liabilities:		
Goodwill and identifiable intangible assets	(212)	(1,124)
Property and equipment, net	(1,494)	(1,860)
Operating lease, right-of-use assets	(4,136)	(3,987)
Prepaid assets	(213)	(169)
Total deferred tax liabilities	(6,055)	(7,140)
Total deferred tax assets, net	\$ 1,023	\$ 185

Changes in the deferred tax valuation allowance are as follows, in thousands:

	Years Ended September 30,	
	2025	2024
Balance at the beginning of the year	\$ 22,658	\$ 21,506
Additions to valuation allowance	2,430	1,152
Balance at the end of the year	\$ 25,088	\$ 22,658

The deferred tax valuation allowance increased by \$2.4 million and \$1.2 million for the years ended September 30, 2025 and 2024, respectively.

In assessing the realizability of deferred tax assets, we consider whether it is more likely than not that some portion or all of the deferred tax assets will be realized. The ultimate realization of deferred tax assets is dependent upon the generation of future taxable income during the periods in which those temporary differences become deductible. We consider the scheduled reversal of deferred tax liabilities, projected future income and tax planning strategies in making this assessment. We have established valuation allowances on all net U.S. deferred tax assets, after considering all of the available objective evidence, both positive and negative, historical and prospective, with greater weight given to historical objective evidence, and determined it is not more likely than not that these assets will be realized.

We intend to permanently reinvest undistributed earnings of our foreign subsidiaries. It is not practicable to estimate the amount of tax that might be payable on the undistributed amounts.

Net Operating Losses

As of September 30, 2025, we have federal net operating loss carryforwards of approximately \$10.0 million that expire at various times between 2032 and 2035. The utilization of those federal net operating losses is limited to approximately \$0.8 million per year. Additionally, we have federal net operating loss carryforwards of approximately \$74.3 million that have an indefinite carryforward period. The utilization of those federal net operating losses is limited to 80% of taxable income. We have no foreign net operating loss carryforwards as of September 30, 2025. We have approximately \$19.1 million of state net operating loss carryforwards, with various expiration dates and limitations on utilization, depending on the state. As of September 30, 2025, we have approximately \$2.7 million of Foreign Tax Credit carryforwards that expire at various times between 2030 and 2035 and approximately \$0.6 million of Federal and State Research and Development credits that expire at various times between 2035 and 2045.

Uncertain Tax Positions

For the years ended September 30, 2025 and 2024 we had no unrecognized tax benefit.

Tax Return Matters

We file income tax returns in China, Singapore, Malaysia and the UK, as well as the U.S. and various states in the U.S. We have not signed any agreements with the Internal Revenue Service, any state or foreign jurisdiction to extend the statute of limitations for any fiscal year. As such, the number of open years is the number of years dictated by statute in each of the respective taxing jurisdictions. U.S. Federal tax returns generally have a 3-year statute of limitations. Therefore, U.S. federal returns for tax years ending on or after September 30, 2022 remain open for examination. In addition, the IRS may adjust attribute carryforwards utilized in an open year even though the year the attributes originated may be closed. State and foreign statutes are generally 3 to 5 years but vary by jurisdiction. These open years contain certain matters that could be subject to differing interpretations of applicable tax laws and regulations as they relate to the amount, timing, or inclusion of revenues and expenses, or the sustainability of income tax positions of Amtech and our subsidiaries.

11. Long-Term Debt

Our finance lease liabilities and long-term debt consists of the following, in thousands:

	September 30,	
	2025	2024
Finance leases	294	290
Less: current portion of finance lease liabilities and long-term debt	(126)	(101)
Finance Lease Liabilities and Long-Term Debt	<u>\$ 168</u>	<u>\$ 189</u>

Interest expense on finance lease liabilities and long-term debt was \$25,000 and \$0.6 million in 2025 and 2024, respectively.

Annual maturities relating to our long-term debt as of September 30, 2025 are as follows, in thousands:

	Annual Maturities
2026	\$ 126
2027	101
2028	27
2029	21
2030	19
Thereafter	—
Total long-term debt	<u>\$ 294</u>

Loan and Security Agreement

On January 17, 2023, we entered into a Loan and Security Agreement (the “Loan Agreement”) among Amtech, its U.S. based wholly owned subsidiaries Bruce Technologies, Inc., BTU International, Inc., Intersurface Dynamics, Incorporated, P.R. Hoffman Machine Products, Inc., and Entrepix, Inc., and UMB Bank, N.A., national banking association. The Loan Agreement provided for (i) a term loan (the “Term Loan”) in the amount of \$12.0 million maturing January 17, 2028, and (ii) a revolving loan facility (the “Revolver”) with an availability of \$8.0 million maturing January 17, 2024, each of which were secured by a first priority lien on substantially all of our assets. The recorded amount of the Term Loan had an interest rate of 6.38% and the Revolver had a floating per annum rate of interest equal to the Prime Rate, adjusted daily.

The Loan Agreement was fully repaid in the fourth quarter of 2024 and was subsequently terminated effective September 11, 2024. See the disclosure in our prior filings with the SEC for a discussion of the financial covenants that were in effect under the Loan Agreement, our failure to comply with the Debt to EBITDA and Fixed Charge Coverage Ratio covenants thereunder, and the Forbearance and Modification Agreement that we operated under prior to terminating this credit facility.

Finance Lease Obligations

Our finance lease obligations totaled \$0.3 million as of September 30, 2025 and September 30, 2024, respectively.

The current and long-term portions of our finance leases are included in the current and long-term portions of finance lease liabilities and long-term debt in the table above and in our Consolidated Balance Sheets as of September 30, 2025 and 2024.

12. Equity and Stock-Based Compensation

Stock-Based Compensation Expense

Stock-based compensation expenses of \$1.2 million and \$1.5 million for 2025 and 2024, respectively, are included in selling, general and administrative expenses. As of September 30, 2025, total compensation cost related to non-vested stock options not yet recognized is \$0.4 million, which is expected to be recognized over the next 1.07 years on a weighted-average basis. As of September 30, 2025, total compensation cost related to nonvested RSUs not yet recognized is \$0.6 million, which is expected to be recognized over the next 2.08 years.

Amtech Equity Compensation Plans

The 2022 Plan, under which 1,000,000 shares could be granted, was adopted by the Board of Directors in November 2021, and approved by the shareholders in March 2022.

The 2007 Plan, under which 500,000 shares could be granted, was adopted by the Board in April 2007, and approved by the shareholders in May 2007. The 2007 Plan was amended in 2009, 2014 and 2015 to add 2,500,000 shares. The plan was also amended in 2019 to extend the term of the plan and allow for the grant of restricted stock units. Upon the adoption of the 2022 Plan, no further awards will be granted from the 2007 Plan. Previously issued awards will remain outstanding in accordance with their terms.

The Non-Employee Directors Stock Option Plan was approved by the shareholders in 1996 for issuance of up to 100,000 shares of common stock to directors. The Non-Employee Directors Stock Option Plan was amended in 2005, 2009 and 2014 to add 400,000 shares. The plan was also amended in 2020 to extend the term of the plan. Upon the adoption of the 2022 Plan as stated above, no further awards will be granted from the Non-Employee Directors Stock Option Plan. Previously issued awards will remain outstanding in accordance with their terms.

Equity compensation plans as of September 30, 2025 are summarized in the table below:

Name of Plan	Shares Authorized	Shares Available for Grant	Options Outstanding	Unvested RSUs Outstanding	Plan Expiration
2022 Plan	1,000,000	825,647	821,116	168,024	Mar. 2032
2007 Plan	3,000,000	—	44,625	—	Mar. 2024
Non-Employee Directors Stock Option Plan	500,000	—	54,000	—	Mar. 2024
		<u>825,647</u>	<u>919,741</u>	<u>168,024</u>	

Stock Options

Stock options issued under the terms of our equity compensation plans have, or will have, an exercise price equal to or greater than the fair market value of the common stock at the date of the option grant and expire no later than 10 years from the date of grant. Options issued under the plans vest over 1 to 3 years. We estimated the fair value of stock option awards on the date of grant using the Black-Scholes option pricing model using the following assumptions:

	Years Ended September 30,	
	2025	2024
Risk free interest rate	4%	4%
Expected life	5 years	5 years
Dividend rate	0%	0%
Volatility	60%	60%

The following table summarizes our stock option activity:

	Years Ended September 30,			
	2025		2024	
	Options	Weighted Average Exercise Price	Options	Weighted Average Exercise Price
Outstanding at beginning of period	1,087,016	\$ 6.97	672,924	\$ 8.76
Granted	120,000	\$ 5.14	620,500	\$ 5.66
Exercised	(71,521)	\$ 5.11	(15,000)	\$ 5.67
Forfeited/expired	(215,754)	\$ 7.86	(191,408)	\$ 9.12
Outstanding at end of period	<u>919,741</u>	\$ 6.67	<u>1,087,016</u>	\$ 6.97
Exercisable at end of period	<u>741,727</u>	\$ 7.05	<u>532,185</u>	\$ 7.64
Weighted average grant-date fair value of options granted during the period	\$ 2.66		\$ 2.50	

The following table summarizes information for stock options outstanding and exercisable as of September 30, 2025:

Range of Exercise Prices	Options Outstanding			Options Exercisable	
	Number Outstanding	Remaining Contractual Life (in years)	Weighted Average Exercise Price Per Share	Number Exercisable	Weighted Average Exercise Price Per Share
\$4.32-\$5.07	80,666	7.52	\$ 4.74	35,318	\$ 4.77
\$5.09-\$5.09	100,000	4.85	\$ 5.09	—	\$ —
\$5.25-\$5.75	83,825	6.08	\$ 5.42	53,825	\$ 5.47
\$6.00-\$6.00	400,000	3.42	\$ 6.00	400,000	\$ 6.00
\$7.40-\$8.82	41,750	6.15	\$ 8.12	41,750	\$ 8.12
\$9.00-\$9.00	150,000	7.87	\$ 9.00	150,000	\$ 9.00
\$9.27-\$9.99	23,500	6.84	\$ 9.45	20,834	\$ 9.48
\$10.22-\$10.22	18,000	6.42	\$ 10.22	18,000	\$ 10.22
\$11.51-\$11.51	12,000	5.48	\$ 11.51	12,000	\$ 11.51
\$15.43-\$15.43	10,000	6.13	\$ 15.43	10,000	\$ 15.43
\$4.32-\$15.43	919,741	5.23	\$ 6.67	741,727	\$ 7.05

The aggregate intrinsic values of options outstanding and options exercisable as of September 30, 2025 were approximately \$2.5 million and \$1.8 million, respectively, which represents the total pre-tax intrinsic value, based on our closing stock price of \$9.26 per share as of September 30, 2025, the last business day of our fiscal year, which would have been received by the option holders had all option holders exercised their options as of that date. The total intrinsic value of stock options exercised was \$93,000 and \$17,000 in 2025 and 2024, respectively.

The following table summarizes our RSU activity during the year ended September 30, 2025:

	Number	Weighted Average Grant Date Fair Value	Fair Value
Nonvested at beginning of year	24,897	\$ 4.82	
Granted	207,524	4.98	1,033,470
Vested, including shares withheld to cover taxes	(24,897)	4.82	120,004 (1)
Forfeited	(39,500)	4.99	197,105
Nonvested at end of period	<u>168,024</u>	<u>\$ 4.98</u>	<u>\$ 1,555,902 (2)</u>

(1) The aggregate fair value of vested RSU's represent the total pre-tax fair value, based on the closing stock price on the day of vesting, which would have been received by holders of RSU's had all such holders sold their underlying shares on that date.

(2) The aggregate fair value of the nonvested RSU's and represents the total pre-tax fair value, based on our closing stock price of \$9.26 as of September 30, 2025, the last trading day of our fiscal year, which would have been received by holders of RSU's had all such holders sold their underlying shares on that date.

13. Benefit Plans

We have retirement plans covering substantially all our employees. The principal plans are our defined contribution plan that covers substantially all of our employees in the United States and the multi-employer pension plan for hourly union employees in Pennsylvania.

Defined Contribution Plan – Domestic employees of Amtech and its subsidiaries who meet certain eligibility requirements may participate, at the employee's option, in the 401(k) Plan. The 401(k) Plan is a defined contribution plan subject to the provisions of ERISA. We match employee contributions to the 401(k) Plan equal to 60% of the participants' elective deferrals, up to 3.6% of the participants' eligible compensation each payroll period. Employees are auto-enrolled upon eligibility at a 6% contribution rate; however, an employee may opt out at their election. The match expense was \$0.3 million and \$0.4 million in 2025 and 2024, respectively.

Pension Plan – Our hourly union employees in Pennsylvania participate in a multi-employer pension plan, the NIGPP, in accordance with the union agreement between PR Hoffman and the United Automobile, Aerospace and Agriculture Implement Workers of America. The agreement was renewed in 2025 for a three-year term that expires September 30, 2028. Every company participating in the plan pays a contribution per hour worked for each employee of the company that is eligible to participate in the NIGPP. Our contributions to the NIGPP were \$30,000 and \$35,000 in 2025 and 2024, respectively.

14. Commitments and Contingencies

Purchase Obligations – As of September 30, 2025, we had unrecorded purchase obligations in the amount of \$4.0 million. These purchase obligations consist of outstanding purchase orders for goods and services. While the amount represents purchase agreements, the actual amounts to be paid may be less in the event that any agreements are renegotiated, canceled or terminated.

Legal Proceedings and Other Claims – From time to time, we are a party to claims and actions for matters arising out of our business operations. We regularly evaluate the status of the legal proceedings and other claims in which we are involved to assess whether a loss is probable or there is a reasonable possibility that a loss, or an additional loss, may have been incurred and determine if accruals are appropriate. If accruals are not appropriate, we further evaluate each legal proceeding to assess whether an estimate of possible loss or range of possible loss can be made for disclosure. Although the outcome of claims and litigation is inherently unpredictable, we believe that we have adequate provisions for any probable and estimable losses. It is possible, nevertheless, that our consolidated financial position, results of operations or liquidity could be materially and adversely affected in any particular period by the resolution of a claim or legal proceeding. Legal expenses related to defense, negotiations, settlements, rulings and advice of outside legal counsel are expensed as incurred.

Employment Contracts – We have employment contracts and change in control agreements with, and severance plans covering, certain officers and management employees under which severance payments would become payable in the event of specified terminations without cause or terminations under certain circumstances after a change in control. If severance payments under the current employment contracts or severance plans were to become payable, the severance payments would generally range from six to twelve months of salary.

15. Reportable Segments

In the operation of the business, management, including our Chief Operating Decision Maker (“CODM”), who is also our Chief Executive Officer, reviews certain financial information, including segmented internal profit and loss statements. The primary profitability measure used by the CODM to review segment operating results is net income. The CODM uses net income to allocate resources during our annual planning process and throughout the year, as well as to assess the performance of our segments, primarily by monitoring actual results compared to prior period and expected results.

Amtech has two operating segments that are structured around the types of product offerings provided to our customers. In addition, the operating segments may be further distinguished by the Company’s respective brands. These two operating segments comprise our two reportable segments discussed below. Our two reportable segments are as follows:

Thermal Processing Solutions – We design, manufacture, sell and service thermal processing equipment and related controls for use by leading semiconductor manufacturers, and in electronics, automotive and other industries.

Semiconductor Fabrication Solutions – We provide consumables, parts and service, and equipment for producing silicon carbide, silicon and gallium nitride wafers, optical components and a variety of crystalline materials.

Information concerning our reportable segments is as follows, in thousands:

	Year Ended September 30, 2025		
	Thermal Processing Solutions	Semiconductor Fabrication Solutions	Total
Revenue	\$ 58,057	\$ 21,307	\$ 79,364
Less:			
Material	27,711	9,602	37,313
Labor	4,837	3,190	8,027
Overhead	4,943	2,098	7,041
Intangible asset impairment	—	—	—
Gross profit	20,566	6,417	26,983
Selling & marketing	7,658	891	8,549
General & administrative	4,771	7,068	11,839
Research & development	2,133	516	2,649
Loss on sale of fixed assets	174	74	248
Goodwill impairment	4,997	15,356	20,353
Intangible asset impairment	—	2,569	2,569
Severance expense	412	224	636
Operating income (loss)	421	(20,281)	(19,860)
Interest income	82	43	125
Interest expense	(22)	(4)	(26)
Other segment items ⁽¹⁾	(1,127)	(9)	(1,136)
Non-segment items ⁽²⁾	—	—	(9,429)
Net loss	\$ (646)	\$ (20,251)	\$ (30,326)

(1) Other segment items consists primarily of expenses related to foreign currency gain or loss and income tax provision (benefit). Thermal Processing Solutions and Semiconductor Fabricated Solutions income tax provision was \$1.4 million and \$13,000.

(2) Non-segment items consists primarily of expenses related to corporate salaries and professional services expenses, income tax, interest income and interest expense.

Year Ended September 30, 2024			
	Thermal Processing Solutions	Semiconductor Fabrication Solutions	Total
Revenue	\$ 69,161	\$ 32,053	\$ 101,214
Less:

China	613	1,005
Other	60	70
	<u>\$ 10,227</u>	<u>\$ 11,647</u>

18. Subsequent Event

Stock Repurchase Program

On December 9, 2025, the Board of Directors (the “Board”) of Amtech Systems, Inc. (the “Company”) authorized and approved a share repurchase program for up to \$5 million of the currently outstanding shares of the Company’s common stock over a period of 12 months. Under the stock repurchase program, the Company intends to repurchase shares through open market purchases, privately-negotiated transactions, block purchases, 10b5-1 plans, or otherwise in accordance with applicable federal securities laws, including Rule 10b-18 of the Securities Exchange Act of 1934 (the “Exchange Act”).

The Company cannot predict when or if it will repurchase any shares of common stock as such stock repurchase program will depend on a number of factors, including constraints specified in any Rule 10b5-1 trading plans, price, general business and market conditions, and alternative investment opportunities. Information regarding share repurchases will be available in the Company’s periodic reports on Form 10-Q and 10-K filed with the Securities and Exchange Commission as required by the applicable rules of the Exchange Act.

This report contains forward-looking information, as that term is defined under the Exchange Act, including information regarding purchases by the Company of its common stock pursuant to any Rule 10b5-1 trading plans. By their nature, forward-looking information and statements are subject to risks, uncertainties, and contingencies, including changes in price and volume and the volatility of the Company’s common stock; adverse developments affecting either or both of prices and trading of exchange-traded securities, including securities listed on the Nasdaq Global Select Market; and unexpected or otherwise unplanned or alternative requirements with respect to the capital investments of the Company. The Company does not undertake to update any forward looking statements or information, including those contained in this report.

ITEM 9. CHANGES IN AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL DISCLOSURE

None.

ITEM 9A. CONTROLS AND PROCEDURES

Conclusion Regarding the Effectiveness of Disclosure Controls and Procedures

Our management, including our Chief Executive Officer (“CEO”) and Chief Financial Officer (“CFO”), has carried out an evaluation of the effectiveness of our disclosure controls and procedures as defined in Exchange Act Rules 13a-15(e) and 15(d)-15(e). Based upon that evaluation, our CEO and CFO have concluded that our disclosure controls and procedures in place were effective as of September 30, 2025 as described further below.

Management’s Report on Internal Control Over Financial Reporting

The management of Amtech Systems, Inc. is responsible for establishing and maintaining effective internal control over financial reporting, as such term is defined in Exchange Act Rules 13a-15(f) and 15d-15(f). Internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles.

Because of its inherent limitation, our internal control systems and procedures may not prevent or detect misstatements. A control system, no matter how well conceived and operated, can provide only reasonable, not absolute, assurance that the objectives of the controls system are met. Because of the inherent limitations in all controls systems, no evaluation of controls can provide absolute assurance that all control issues and instances of fraud, if any, have been detected. Also, projections of any evaluation of effectiveness to future periods are subject to the risks that controls may become inadequate because of changes in condition, or that the degree of compliance with the policies and procedures may deteriorate.

Our management performed an assessment of the effectiveness of our internal control over financial reporting as of September 30, 2025, utilizing the criteria established in the “Internal Control—Integrated Framework (2013)” issued by the Committee of Sponsoring Organizations of the Treadway Commission. The objective of this assessment was to determine whether our internal control over financial reporting was effective as of September 30, 2025. Based on its assessment, management has concluded that, as of September 30, the Company’s internal control over financial reporting is effective.

This annual report does not include an attestation report of our registered public accounting firm regarding internal control over financial reporting. Management’s report was not subject to attestation by our registered public accounting firm pursuant to an exemption for non-accelerated filers set forth in Section 989G of the Dodd-Frank Wall Street Reform and Consumer Protection Act.

Changes in Internal Control Over Financial Reporting

There were no changes in the Company’s internal control over financial reporting (as such term is defined in Rules 13a-15(f) and 15d-15(f) under the Exchange Act) during the three months ended September 30, 2025 that have materially affected, or are reasonably likely to materially affect, the internal control over financial reporting of the Company.

ITEM 9B. OTHER INFORMATION

None.

ITEM 9C. DISCLOSURE REGARDING FOREIGN JURISDICTIONS THAT PREVENT INSPECTIONS

Not applicable.

PART III

Pursuant to Paragraph G(3) of the General Instructions to Form 10-K, the information required by Part III of Form 10-K is incorporated by reference to the Proxy Statement to be filed within 120 days of September 30, 2025, our fiscal year end. In the event the Proxy Statement is not filed within 120 days, the information required by Part III of this Form 10-K will be filed pursuant to an amendment to this Annual Report on Form 10-K within the 120-day period.

ITEM 10. DIRECTORS, EXECUTIVE OFFICERS AND GOVERNANCE

The information required by this item (i) is incorporated herein by reference to the Proxy Statement or (ii) will be filed pursuant to an amendment to this Annual Report on Form 10-K, in each case, within 120 days of September 30, 2025, our fiscal year end.

ITEM 11. EXECUTIVE COMPENSATION

The information required by this item (i) is incorporated herein by reference to the Proxy Statement or (ii) will be filed pursuant to an amendment to this Annual Report on Form 10-K, in each case, within 120 days of September 30, 2025, our fiscal year end.

ITEM 12. SECURITY OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT AND RELATED STOCKHOLDER MATTERS

The information required by this item (i) is incorporated herein by reference to the Proxy Statement or (ii) will be filed pursuant to an amendment to this Annual Report on Form 10-K, in each case, within 120 days of September 30, 2025, our fiscal year end.

ITEM 13. CERTAIN RELATIONSHIPS AND RELATED TRANSACTIONS, AND DIRECTOR INDEPENDENCE

The information required by this item (i) is incorporated herein by reference to the Proxy Statement or (ii) will be filed pursuant to an amendment to this Annual Report on Form 10-K, in each case, within 120 days of September 30, 2025, our fiscal year end.

ITEM 14. PRINCIPAL ACCOUNTING FEES AND SERVICES

The information required by this item (i) is incorporated herein by reference to the Proxy Statement or (ii) will be filed pursuant to an amendment to this Annual Report on Form 10-K, in each case, within 120 days of September 30, 2025, our fiscal year end.

PART IV

ITEM 15. EXHIBITS AND FINANCIAL STATEMENT SCHEDULES

(a) Financial Statements and Schedules

The consolidated financial statements required by this item are set forth on the pages indicated in Item 8.

All financial statement schedules are omitted because they are either not applicable or because the required information is shown in the consolidated financial statements or notes thereto.

(b) Exhibits

The exhibits filed as part of this Annual Report on Form 10-K are listed on the Exhibit Index immediately preceding the signature page hereto, which is incorporated herein by reference.

ITEM 16. FORM 10-K SUMMARY

None.

AMTECH SYSTEMS, INC. AND ITS SUBSIDIARIES
CERTIFICATION PURSUANT TO RULE 13a-14(a)/15d-14(a)
OF THE SECURITIES EXCHANGE ACT OF 1934, AS AMENDED

I, Robert C. Daigle, certify that:

1. I have reviewed this Annual Report on Form 10-K of Amtech Systems, Inc. (the “registrant”);
2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;
4. The registrant’s other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:
 - (a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
 - (b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
 - (c) Evaluated the effectiveness of the registrant’s disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
 - (d) Disclosed in this report any change in the registrant’s internal control over financial reporting that occurred during the registrant’s most recent fiscal quarter (the registrant’s fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant’s internal control over financial reporting; and
5. The registrant’s other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant’s auditors and the audit committee of registrant’s board of directors (or persons performing the equivalent functions):
 - (a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant’s ability to record, process, summarize and report financial information; and
 - (b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant’s internal control over financial reporting.
